Expert systems and real time systems technology have been developed independently Expert systems have been successfully implemented in many complex applications traditionally performed by human experts Real time systems have been successfully applied in areas requiring interaction with dynamic environments control and monitoring applications for example Merging these two technologies will yield intelligent systems capable of interacting with complex dynamic environments an area in which human operators exhibit poor productivity due to cognitive overload **Data Flow**

Computing John A. Sharp,1992 There is an increasing interest in data flow programming techniques This interest is motivated in part by the rapid advances in technology and the need for distributed processing techniques in part by a desire for faster throughput by applying parallel processing techniques and in part by search for a programming tool that is closer to the problem solving methods that people naturally adopts rather than current programming languages This book contains a selection of chapters by researchers on various aspects of the data flow approach in computing Topics covered include comparisons of various data flow machine designs data flow architectures intentional programming and operator nets and the relationship between data flow models and modern structured design techniques among others The book also includes a brief introduction to the data flow approach a bibliography and reviews of where research into data flow might be heading
