Zadeh, 2004-05-18 This book constitutes the refereed proceedings of the 7th International Conference on Artificial Intelligence and Soft Computing ICAISC 2004 held in Zakopane Poland in June 2004 The 172 revised contributed papers presented together with 17 invited papers were carefully reviewed and selected from 250 submissions The papers are organized in topical sections on neural networks fuzzy systems evolutionary algorithms rough sets soft computing in classification image processing robotics multiagent systems problems in AI intelligent control modeling and system identification medical applications mechanical applications and applications in various fields *Data Mining and Knowledge Discovery in Real Life Applications* Julio Ponce, Adem Karahoca, 2009-01-01 This book presents four different ways of theoretical and practical advances and applications of data mining in different promising areas like Industrialist Biological and Social Twenty six chapters cover different special topics with proposed novel ideas Each chapter gives an overview of the subjects and some of the chapters have cases with offered data mining solutions We hope that this book will be a useful aid in showing a right way for the students researchers and practitioners in their studies [Advances in Data Mining Knowledge Discovery and Applications](#) Adem Karahoca, 2012-09-12 *Advances in Data Mining Knowledge Discovery and Applications* aims to help data miners researchers scholars and PhD students who wish to apply data mining techniques The primary contribution of this book is highlighting frontier fields and implementations of the knowledge discovery and data mining It seems to be same things are repeated again But in general same approach and techniques may help us in different fields and expertise areas This book presents knowledge discovery and data mining applications in two different sections As known that data mining covers areas of statistics machine learning data management and databases pattern recognition artificial intelligence and other areas In this book most of the areas are covered with different data mining applications The eighteen chapters have been classified in two parts Knowledge Discovery and Data Mining Applications *Intelligent Tutoring Systems in E-Learning Environments: Design, Implementation and Evaluation* Stankov, Slavomir, Glavinic, Vlado, Rosic, Marko, 2010-07-31 This book addresses intelligent tutoring system ITS environments from the standpoint of information and communication technology ICT and the recent accomplishments within both the e learning paradigm and e learning systems Provided by publisher *Automatic Control, Robotics, and Information Processing* Piotr Kulczycki, Józef Korbicz, Janusz Kacprzyk, 2020-09-03 This book presents a wide and comprehensive range of issues and problems in various fields of science and engineering from both theoretical and applied perspectives The desire to develop more effective and efficient tools and techniques for dealing with complex processes and systems has been a natural inspiration for the emergence of numerous fields of science and technology in particular control and automation and more recently robotics The contributions gathered here concern the development of methods and algorithms to determine best practices regarding broadly perceived decisions

or controls From an engineering standpoint many of them focus on how to automate a specific process or complex system From a tools based perspective several contributions address the development of analytic and algorithmic methods and techniques devices and systems that make it possible to develop and subsequently implement the automation and robotization of crucial areas of human activity All topics discussed are illustrated with sample applications

Explainable and Interpretable Models in Computer Vision and Machine Learning Hugo Jair Escalante, Sergio Escalera, Isabelle Guyon, Xavier Baró, Yağmur Güçlütürk, Umut Güçlü, Marcel van Gerven, 2018-11-29 This book compiles leading research on the development of explainable and interpretable machine learning methods in the context of computer vision and machine learning Research progress in computer vision and pattern recognition has led to a variety of modeling techniques with almost human like performance Although these models have obtained astounding results they are limited in their explainability and interpretability what is the rationale behind the decision made what in the model structure explains its functioning Hence while good performance is a critical required characteristic for learning machines explainability and interpretability capabilities are needed to take learning machines to the next step to include them in decision support systems involving human supervision This book written by leading international researchers addresses key topics of explainability and interpretability including the following Evaluation and Generalization in Interpretable Machine Learning Explanation Methods in Deep Learning Learning Functional Causal Models with Generative Neural Networks Learning Interpretable Rules for Multi Label Classification Structuring Neural Networks for More Explainable Predictions Generating Post Hoc Rationales of Deep Visual Classification Decisions Ensembling Visual Explanations Explainable Deep Driving by Visualizing Causal Attention Interdisciplinary Perspective on Algorithmic Job Candidate Search Multimodal Personality Trait Analysis for Explainable Modeling of Job Interview Decisions Inherent Explainability Pattern Theory based Video Event Interpretations
