Defining Physical Education:

Defining Physical Education David Kirk, 2011 First published in 1992 David Kirk's book analyses the public debate leading up to the 1987 General Election over the place and purpose of physical education in British schools. By locating this debate in a historical context specifically in the period following the end of the Second World War it attempts to illustrate how the meaning of school physical education and its aims, content and pedagogy were contested by a number of vying groups. It stresses the influence of the culture of postwar social reconstruction in shaping these groups' ideas about physical education. Through this analysis the book attempts to explain how physical education has been socially constructed during the postwar years and more specifically to suggest how the subject came to be used as a symbol of subversive left-wing values in the campaign leading to the 1987 election. In more general terms the book provides a case study of the social construction of school knowledge. The book takes an original approach to the question of curriculum change in physical education building on increasing interest in historical research in the field of curriculum studies. It adopts a social constructionist perspective arguing that change occurs through the active involvement of competing groups in struggles over limited material and ideological discursive resources. It also draws on contemporary developments in social and cultural theory particularly the concepts of discourse and ideological hegemony to explain how the meaning of physical education has been constructed and how particular definitions of the subject have become orthodoxes. The book presents new historical evidence from a period which had previously been neglected by researchers despite the fact that 1945 marked a watershed in the development of the understanding and teaching of physical education in schools.

Physical Education Futures

David Kirk, 2009-09-10 This book traces the dominant shift over the last century from an idea of physical education as gymnastics to an idea of physical education as sport technique and outlines the contemporary processes of commodification and commercialization of physical culture and academicization of teaching that have already begun to make this emphasis on sport-related skills problematic.

Breathing Race into the Machine Lundy Braun, 2014-02-01 How race became embedded in a medical instrument In the antebellum South plantation physicians used a new medical device the spirometer to show that lung volume and therefore vital capacity were supposedly less in black slaves than in white citizens At the end of the Civil War a large study of racial difference employing the spirometer appeared to confirm the finding which was then applied to argue that slaves were unfit for freedom What is astonishing is that this example of racial thinking is anything but a historical relic In Breathing Race into the Machine science studies scholar Lundy Braun traces the little known history of the spirometer to reveal the social and scientific processes by which medical instruments have worked to naturalize racial and ethnic differences from Victorian Britain to today Routinely a factor in clinical diagnoses preemployment physicals and disability estimates spirometers are often race corrected typically reducing normal values for African Americans by 15 percent An unsettling account of the pernicious effects of racial thinking that divides people along genetic lines Breathing Race into the Machine helps us understand how race enters into science and shapes medical research and practice Honorable Mention 2017 Rachel Carson Prize Society for the Social Studies of Science Winner of the 2018 Ludwik Fleck Prize from the Society for Social Studies of Science
