

The image features a surreal landscape with a horizon line. The sky is a gradient of purple and blue, with several large, dark, faceted geometric shapes floating in the air. These shapes resemble crystalline structures or complex polyhedra. The ground below is a dark, flat expanse with some low, rounded hills in the distance. The overall mood is mysterious and futuristic.

Artificial Intelligence and Art History, 2026-01-22 Artificial intelligence is transforming human creativity, and the study of art. Yet it is a technology that is difficult to understand from a position outside computer science. This timely volume, *Artificial Intelligence and Art History*, investigates tensions and opportunities that are arising in human-machine dialogues about visual art. Contributors explore recent developments in machine learning and computer vision and debate whether algorithmic analyses of art open new possibilities for human seeing. Do quantitative methodologies threaten humanistic discourses about cultural artefacts? Alternatively, can working at scale offer fresh perspectives on traditional conceptions of and approaches to artistic style, methods, and techniques? The chapters in this volume demonstrate how a range of technologies falling under the umbrella of AI challenge the epistemological ambitions of both humanistic and scientific study while also addressing the consequences of understanding vision as a metaphor for a computational process. By investigating how AI and computer vision are working or might work in partnership with art historical research methods, this volume also interrogates urgent ethical questions that are impacting on research agendas in this interdisciplinary field.
