*Degrees of Difference* Nancy S. Niemi, 2017-04-19 This volume investigates the dissonance between the supposed advantage held by educated women and their continued lack of economic and political power Niemi explains the developments of the so called female advantage and boy crisis in American higher education setting them alongside socioeconomic and racial developments in women s and men s lives throughout the last 40 years Exploring the relationship between higher education credentials and their utility in creating political economic and social success *Degrees of Difference* identifies ways in which gender and academic achievement contribute to women s and men s power to shape their lives This important book brings new light to the issues of power gender identities and the role of American higher education in creating gender equity

**Unlocking the Brain** Georg Northoff, 2013-11-11 Neuroscience has made considerable progress in figuring out how the brain works We know much about the molecular genetic and biochemical underpinnings of sensory and motor functions and recent neuroimaging work has opened the door to investigating the neural underpinnings of higher order cognitive functions such as memory attention and even free will In these types of investigations researchers apply specific stimuli to induce neural activity in the brain and look for the function in question However there may be more to the brain and its neuronal states than the changes in activity we induce by applying particular external stimuli In Volume 1 of *Unlocking the Brain* Georg Northoff presents his argument for how the brain must code the relationship between its resting state activity and stimulus induced activity in order to enable and predispose mental states and consciousness By presupposing such a basic sense of neural code the author ventures into different territories and fields of current neuroscience including a comprehensive exploration of the features of resting state activity as distinguishable from and stimulus induced activity sparse coding and predictive coding and spatial and temporal features of the resting state itself This yields a unique and novel picture of the brain and will have a major and lasting impact on neuroscientists working in neuroscience psychiatry and related fields

*Unlocking the Brain: Volume 2: Consciousness* Georg Northoff, 2013-11-11 Neuroscience has made considerable progress in figuring out how the brain works We know much about the molecular genetic and biochemical underpinnings of sensory and motor functions Recent neuroimaging work has opened the door to investigating the neural underpinnings of higher order cognitive functions such as memory attention and even free will In these types of investigations researchers apply specific stimuli to induce neural activity in the brain and look for the function in question However there may be more to the brain and its neuronal states than the changes in activity we induce by applying particular external stimuli In Volume 2 of *Unlocking the Brain* Georg Northoff addresses consciousness by hypothesizing about the relationship between particular neuronal mechanisms and the various phenomenal features of consciousness Northoff puts consciousness in the context of the resting state of the brain thereby delivering a new point of view to the debate that permits very interesting insights into the nature of consciousness Moreover he describes and

discusses detailed findings from different branches of neuroscience including single cell data animal data human imaging data and psychiatric findings This yields a unique and novel picture of the brain and will have a major and lasting impact on neuroscientists working in neuroscience psychiatry and related fields

**Difference and Repetition** Gilles Deleuze, 2004-01-01 Since its publication in 1968 *Difference and Repetition* an exposition of the critique of identity has come to be considered a contemporary classic in philosophy and one of Deleuze's most important works The text follows the development of two central concepts those of pure difference and complex repetition It shows how the two concepts are related difference implying divergence and decentring repetition being associated with displacement and disguising The work moves deftly between Hegel Kierkegaard Freud Althusser and Nietzsche to establish a fundamental critique of Western metaphysics and has been a central text in initiating the shift in French thought away from Hegel and Marx towards Nietzsche and Freud
