

## Principios del Diseño

Los principios de diseño son las "leyes" que determinan las relaciones y vínculos que se establecen entre los elementos compositivos de un diseño.

Los principios del diseño aplican para todas las ramas del diseño: arquitectura, industrial, interiores, gráfico.

Son herramientas universales que pueden aplicarse al momento de diseñar algo y que nos ayudarán a sustentar nuestro diseño de manera funcional.

## Principios del Diseño

El diseño siempre debe de solucionar una problemática y es esta característica sobre la cual siempre debemos de basar nuestro proceso al momento de diseñar. Si el diseño pierde la funcionalidad, no estará cumpliendo su cometido.

Gamma ray detection techniques for radioisotope imaging purposes are quickly evolving Monte Carlo simulations show the possibility of achieving an outstanding image spatial resolution in the images obtained with techniques using electronic collimation The great advantage of using electronic collimation is the increased efficiency of the gamma camera with respect to the usage of the mechanical collimation technique These new imaging techniques require radiation detectors with very specific features such as low noise desired stooping power and compactness In this thesis project an apparatus for detection of a Compton deposition of gamma rays capable of differentiating the position of interaction of the gamma ray in the active volume of the detector has been developed The design and manufacture of such an apparatus implies the selection and characterization of the radiation sensitive material and its calibration as well as its associated electronics in order to achieve the critical requirements to be used as part of the electronic collimated gamma camera Along with the detector development the electronic collimation requires a very specific control system The required logic system that makes possible the usage of the apparatus as part of the the electronic collimation set up has also been developed as part of this thesis work This electronic system is meant to work in coordination with other sensors and its final output is to give exact information of the

photon electron interaction points in order for an image to be deduced The result of this thesis work is a radiation detector ready to be used as the tracker component in the application of the electronic collimation technique Its control system allows it to be used to build a Compton camera by simply removing the mechanical collimator of a regular gamma camera and arranging both detectors in the desired radioisotope imaging electronic collimation scenario
