Computers and the Future of Skill Demand Stuart W. Elliott, 2017 Computer scientists are working on reproducing all human skills using artificial intelligence machine learning and robotics Unsurprisingly then many people worry that these advances will dramatically change work skills in the years ahead and perhaps leave many workers unemployable This report develops a new approach to understanding these computer capabilities by using a test based on the OECD s Survey of Adult Skills PIAAC to compare computers with human workers The test assesses three skills that are widely used at work and are an important focus of education literacy numeracy and problem solving with computers Most workers in OECD countries use the three skills every day However computers are close to reproducing these skills at the proficiency level of most adults in the workforce Only 13% of workers now use these skills on a daily basis with a proficiency that is clearly higher than computers The findings raise troubling questions about whether most workers will be able to acquire the skills they need as these new computer capabilities are increasingly used over the next few decades To answer those questions the report s approach could be extended across the full range of work skills We need to know how computers and people compare across all skills to develop successful policies for work and education for the future

Computers in Schools William J. Bramble, Emanuel J. Mason, Paul Berg, 1985 Computers and Problem Solving David G Moursund, 1986 Written in the form of a workshop transcript for participants to take with them this booklet is designed to present new ideas reinforce ideas covered in the workshop suggest applications of workshop content and encourage participants to use the applications The concept of problem is defined key ideas in problem solving are considered roles of computers in problem solving and building on previous work are discussed effective procedures for problem solving are explored and conclusions and recommendations are presented Exercises and debriefing activities for participants are included throughout the text applications and activities are listed at the end of each chapter and references are provided A brief Guide to Active Listening is appended Numerous humorous illustrations are inserted throughout the text KM

Microcomputers and the Classroom Teacher Gail A. schools computer assisted instruction software applications software and databases 3 integrating computers into the classroom 4 developing a plan for using computers in the classroom setting up a classroom computer center and working with only one computer in the classroom and 5 evaluating educational software general questions questions about instructional design and questions about physical characteristics of the program A concluding statement argues that the key to continued growth and expansion in the educational computing field lies with classroom teachers and urges them to take an interest in computers and begin to use this important new tool in their classrooms A 71 item reference list concludes the document EW
