## After Experience:

**Virtual Environments in Clinical Psychology and Neuroscience** Giuseppe Riva, Brenda K. Wiederhold, E. Molinari, 2006-12-15 Virtual Reality VR offers the potential to develop human testing and training environments that allow for the precise control of complex stimulus presentations in which human cognitive and functional performance can be accurately assessed and rehabilitated. However, basic feasibility and human issues need to be addressed in order for this technology to be reasonably and efficiently applied in clinical psychology. The book, written in a scholarly style, will provide rationales for virtual reality's applicability in clinical psychology. We will review the relevant literature regarding theoretical and pragmatic issues for these applications and provide a description of ongoing work developed worldwide. The topics directly involve critical issues for clinicians, designers, and users and will be discussed with scientific competence without neglecting clarity and empirical cases with suggestions for actual use. The book is divided into three main sections: VR in clinical psychology, opportunities and challenges; VR in treatment of phobias; and VR in clinical assessment and therapy.

**The Youth Labor Market Problem** Richard B. Freeman, David A. Wise, 2007-12-01 This volume brings together a massive body of much-needed research information on a problem of crucial importance to labor economists, policy makers, and society in general: unemployment among the young. The thirteen studies detail the ambiguity and inadequacy of our present standard statistics as applied to youth employment, point out the error in many commonly accepted views, and show that many critically important aspects of this problem are not adequately understood. These studies also supply a significant amount of raw data, furnish a platform for further research and theoretical work in labor economics, and direct attention to promising avenues for future programs.
