Creating A Data Driven System:

Creating a Data Driven System Peter Holly, 2006 Merrill Education and ETS Educational Testing Service are proud to present Creating a Data Driven System by Peter J Holly ETS 2003 This brief workbook provides a model of what can be done to become a data using system at the local level for the twin purposes of accountability and development In building on current practice this model also extrapolates from the present to the future tense by fitting the existing puzzle pieces into a more holistic comprehensive system of data use

Data-Driven Systems and Intelligent Applications Mangesh M. Ghonge, N. Krishna Chaitanya, Pradeep N, Harish Garg, Alessandro Bruno, 2024-10-09 This book comprehensively discusses basic data driven intelligent systems the methods for processing the data and cloud computing with artificial intelligence It presents fundamental and advanced techniques used for handling large user data and for the data stored in the cloud It further covers data driven decision making for smart logistics and manufacturing systems network security and privacy issues in cloud computing This book Discusses intelligent systems and cloud computing with the help of artificial intelligence and machine learning Showcases the importance of machine learning and deep learning in data driven and cloud based applications to improve their capabilities and intelligence Presents the latest developments in data driven and cloud applications with respect to their design and architecture Covers artificial intelligence methods along with their experimental result analysis through data processing tools Presents the advent of machine learning deep learning and reinforcement technique for cloud computing to provide cost effective and efficient services The text will be useful for senior undergraduate graduate students and academic researchers in diverse fields including electrical engineering electronics and communications engineering computer engineering manufacturing engineering and production engineering

Polynomial Approximation for Data-Driven System Analysis and Control of Nonlinear Systems Tim Martin, 2024-12-15 This thesis presents data driven methods for nonlinear systems enabling the verification of system theoretical properties and the design of state feedbacks based on measured trajectories Despite noisy data the developed methods provide rigorous guarantees and leverage convex optimization Classical control techniques require a mathematical model of the system dynamics which derivation from first principles often demands expert knowledge or is time consuming In contrast data based control methods determine system properties and controllers from system trajectories Whereas recent developments address linear systems dynamical systems are generally nonlinear in practice Therefore this thesis first introduces a data based system representation for unknown polynomial systems to determine dissipativity and integral quadratic constraints via sum of squares optimization The second part of the thesis establishes a polynomial representation of nonlinear systems based on polynomial interpolation Due to the unknown interpolation polynomial a set of polynomials containing the actual interpolation polynomial is deduced from noisy data This set along with a polynomial bound on the approximation error forms the basis for determining dissipativity properties and designing state feedbacks with stability guarantees utilizing robust

control techniques and sum of squares relaxation
