

Axiomatic Semantics

- The meaning of a program is defined by a formal system that allows one to deduce true properties of that program. No specific meaning is attached to any *particular* program by such a system. The task of determining which properties are of interest is left to the programmer.
- In this setting, we are interested in assertions about program state (in particular values of program variables). Each such assertion can be couched as what's known as a *Hoare triple* (after C.A.R. Hoare)

$\{P\}S\{Q\}$

which is interpreted as follows:

Assertion Q will hold in the state yielded immediately upon termination of statement S when executed in state satisfying assertion P.

- By way of example, consider the following:

$\{x = A\} x := x + 1 \{x = A + 1\}$

- Hoare triples are typically used to express partial correctness of a program, however, one can use them to specify the conditions under which a program will terminate.
