Current Directions in Computer Music Research Max V. Mathews, John Robinson Pierce, 1989 **Sourcebook for Research in Music** Phillip Crabtree, Donald H. Foster, 1993 This bibliography of bibliographies lists and describes sources from basic references to highly specialized materials Valuable as a classroom text and as a research tool for scholars librarians performers and teachers *Automatic Generation of Computer Animation* Ruqian Lu, Songmao Zhang, 2003-08-06 We are both fans of watching animated stories Every evening before or after dinner we always sit in front of the television and watch the animation program which is originally produced and shown for children We find ourselves becoming younger while immersed in the interesting plot of the animation how the princess is first killed and then rescued how the little rat defeats the big cat etc But what we have found in those animation programs are not only interesting plots but also a big chance for the application of computer science and artificial intelligence techniques As is well known the cost of producing animated movies is very high even with the use of computer graphics techniques Turning a story in text form into an animated movie is a long and complicated procedure We came to the conclusion that many parts of this process could be automated by using artificial intelligence techniques It is actually a challenge and test for machine intelligence So we decided to explore the possibility of a full life cycle automation of computer animation generation By full life cycle we mean the generation process of computer animation from a children's story in natural language text form to the final animated movie It is of course a task of immense difficulty However we decided to try our best and to see how far we could go *Proceedings of the ... International Computer Music Conference* , 1995 *Computers in Music Research* , 1989 Computational Neuroscience Eric L. Schwartz, 1993-08-26 The thirty original contributions in this book provide a working definition of computational neuroscience as the area in which problems lie simultaneously within computer science and neuroscience They review this emerging field in historical and philosophical overviews and in stimulating summaries of recent results Leading researchers address the structure of the brain and the computational problems associated with describing and understanding this structure at the synaptic neural map and system levels The overview chapters discuss the early days of the field provide a philosophical analysis of the problems associated with confusion between brain metaphor and brain theory and take up the scope and structure of computational neuroscience Synaptic level structure is addressed in chapters that relate the properties of dendritic branches spines and synapses to the biophysics of computation and provide a connection between real neuron architectures and neural network simulations The network level chapters take up the preattentive perception of 3 D forms oscillation in neural networks the neurobiological significance of new learning models and the analysis of neural assemblies and local learning rides Map level structure is explored in chapters on the bat echolocation system cat orientation maps primate stereo vision cortical cognitive maps dynamic remapping in primate visual cortex and computer aided reconstruction of topographic and columnar maps in primates The system level chapters focus on the oculomotor system VLSI models of

early vision schemas for high level vision goal directed movements modular learning effects of applied electric current fields on cortical neural activity neuropsychological studies of brain and mind and an information theoretic view of analog representation in striate cortex Eric L. Cremers, 1999-09-01 For many years Artificial Intelligence technology has served in a great variety of successful applications AI researchers have contributed much to the vision of the so called Information Society As early as the 1980s some of us imagined distributed knowledge bases containing the explicable knowledge of a company or any other organization Today such systems are becoming reality In the process other technologies have had to be developed and AI technology has blended with them and companies are now sensitive to this topic The Internet and WWW have provided the global infrastructure while at the same time companies have become global in nearly every aspect of enterprise This process has just started a little experience has been gained and therefore it is tempting to reflect and try to forecast what the next steps may be This has given us one of the two main topics of the 23rd Annual German Conference on Artificial Intelligence KI 99 held at the University of Bonn The Knowledge Society Two of our invited speakers Helmut Willke Bielefeld and Hans Peter Kriegel Munich dwell on different aspects with different perspectives Helmut Willke deals with the concept of virtual organizations while Hans Peter Kriegel applies data mining concepts to pattern recognition tasks The three application forums are also part of the Knowledge Society topic IT based innovation for environment and development Knowledge management in enterprises and Knowledge management in village and city planning of the information society Intentions in Communication Philip R. Cohen, Jerry L. Morgan, Martha E. Pollack, 1990 Intentions in Communication brings together major theorists from artificial intelligence and computer science linguistics philosophy and psychology whose work develops the foundations for an account of the role of intentions in a comprehensive theory of communication It demonstrates for the first time the emerging cooperation among disciplines concerned with the fundamental role of intention in communication The fourteen contributions in this book address central questions about the nature of intention as it is understood in theories of communication the crucial role of intention recognition in understanding utterances the use of principles of rational interaction in interpreting speech acts the contribution of intonation contours to intention recognition and the need for more general models of intention that support a view of dialogue as a collaborative activity The contributors are Michael E.
