Distributed Systems Mack W. Alford, 1985 Designing Software-Intensive Systems: Methods and Principles Tiako, Pierre F., 2008-07-31 This book addresses the complex issues associated with software engineering environment capabilities for designing real time embedded software systems Provided by publisher **Distributed Systems** Albert Fleischmann, 2012-12-06 The purpose of this book is to make the reader familiar with software engineering for distributed systems Software engineering is a valuable discipline in the development of software The reader has surely heard of software systems completed months or years later than scheduled with huge cost overruns systems which on completion did not provide the performance promised and systems so catastrophic that they had to be abandoned without ever doing any useful work Software engineering is the discipline of creating and maintaining software when used in conjunction with more general methods for effective management its use does reduce the incidence of horrors mentioned above The book gives a good impression of software engineering particularly for distributed systems It emphasises the relationship between software life cycles methods tools and project management and how these constitute the framework of an open software engineering environment especially in the development of distributed software systems There is no closed software engineering environment which can encompass the full range of software missions just as no single flight plan airplane or pilot can perform all aviation missions There are some common activities in software engineering which must be addressed independent of the applied life cycle or methodology Different life cycles methods related tools and project management approaches should fit in such a software engineering framework **Principles of Distributed Systems** Teruo Higashino, 2005-07-20 This book constitutes the thoroughly refereed post proceedings of the 8th International Conference on Principles of Distributed Systems OPODIS 2004 held at Grenoble France in December 2004 The 30 revised full papers presented together with abstracts of 2 invited talks were carefully reviewed and selected from 102 submissions The papers are organized in topical sections on design of distributed systems ad hoc networks and mobile agents grid and networks security distributed algorithms self stabilization sensor networks and task resource allocation **Networking and Information Technology Research and Development (NITRD) Program: Supplement to the President's Budget for FY 2012** , Coordinated Computing Robert E. Filman, Daniel P. Friedman, 1984 This is one of the first books that attempts to discuss distributed programming It covers a wide spectrum of distributed programming models and makes a relative comparison of various message passing models concurrent languages and distributed programming languages The authors treatment of exchange functions which is not widely available otherwise discusses some of the issues of realtime programming languages After a brief review of computation theory programming languages synchronization mechanisms and primitives of distributed computing the authors discuss seven models for coordinated computing various programming
