Proceedings of the Eighth International Conference on Difference Equations and Applications Saber N. Elaydi, G.

Ladas, Bernd Aulbach, Ondrej Dosly, 2005-04-29 The Eighth International Conference on Difference Equations and Applications was held at Masaryk University in Brno Czech Republic This volume comprises refereed papers presented at this conference These papers cover all important themes conjectures and open problems in the fields of discrete dynamical systems and ordinary and partial differential equations *Differential and Difference Equations with Applications* Sandra Pinelas, Michel Chipot, Zuzana Dosla, 2013-09-21 The volume contains carefully selected papers presented at the International Conference on Differential Difference Equations and Applications held in Ponta Delgada Azores from July 4 8 2011 in honor of Professor Ravi P Agarwal The objective of the gathering was to bring together researchers in the fields of differential difference equations and to promote the exchange of ideas and research The papers cover all areas of differential and difference equations with a special emphasis on applications **Symmetries and Integrability of Difference Equations** Decio Levi, Raphaël Rebelo, Pavel Winternitz, 2017-06-30 This book shows how Lie group and integrability techniques originally developed for differential equations have been adapted to the case of difference equations Difference equations are playing an increasingly important role in the natural sciences Indeed many phenomena are inherently discrete and thus naturally described by difference equations More fundamentally in subatomic physics space time may actually be discrete Differential equations would then just be approximations of more basic discrete ones Moreover when using differential equations to analyze continuous processes it is often necessary to resort to numerical methods This always involves a discretization of the differential equations involved thus replacing them by difference ones Each of the nine peer reviewed chapters in this volume serves as a self contained treatment of a topic containing introductory material as well as the latest research results and exercises Each chapter is presented by one or more early career researchers in the specific field of their expertise and in turn written for early career researchers As a survey of the current state of the art this book will serve as a valuable reference and is particularly well suited as an introduction to the field of symmetries and integrability of difference equations Therefore the book will be welcomed by advanced undergraduate and graduate students as well as by more advanced researchers Differential Equations and Their Applications Martin Braun, 2012 1 First order differential equations 1 1 Introduction 1 2 First order linear differential equations 1 3 The van Meegeren art forgeries 1 4 Separable equations 1 5 Population models 1 6 An atomic waste disposal problem 1 7 The dynamics of tumor growth mixing problems and orthogonal trajectories 1 8 Exact equations and why we cannot solve very many differential equations 1 9 The existence uniqueness theorem Picard iteration 1 10 Difference equations and how to compute the interest due on your student loans 2 Second order linear differential equations 2 1 Algebraic properties of solutions 2 2 Linear equations with constant coefficients 2 2 1 Complex roots 2 2 2 Equal roots reduction of order 2 3 The nonhomogeneous equation 2 4 The method of variation of parameters 2 5 The method of judicious guessing 2 6 Mechanical vibrations 2 6 1 The Tacoma Bridge disaster 2 6 2 Electrical networks 2 7 A model for the detection of diabetes 2 8 Series solutions 2 8 1 Singular points the method of Frobenius 2 9 The
