Representation in the Brain Asim Roy, Leonid Perlovsky, Tarek Besold, Juyang Weng, Jonathan Edwards, 2018-09-28 This eBook contains ten articles on the topic of representation of abstract concepts both simple and complex at the neural level in the brain Seven of the articles directly address the main competing theories of mental representation localist and distributed Four of these articles argue either on a theoretical basis or with neurophysiological evidence that abstract concepts simple or complex exist have to exist at either the single cell level or in an exclusive neural cell assembly There are three other papers that argue for sparse distributed representation population coding of abstract concepts There are two other papers that discuss neural implementation of symbolic models The remaining paper deals with learning of motor skills from imagery

versus actual execution A summary of these papers is provided in the Editorial **Folk Psychology and the Philosophy of Mind** Scott M. Christensen, Dale R. Turner, 2013-04-15 Within the past ten years the discussion of the nature of folk psychology and its role in explaining behavior and thought has become central to the philosophy of mind However no comprehensive account of the contemporary debate or collection of the works that make up this debate has yet been available Intending to fill this gap this volume begins with the crucial background for the contemporary debate and proceeds with a broad range of responses to and developments of these works from those who argue that folk theory is a misnomer to those who regard folk theory as legitimately explanatory and necessary for any adequate account of human behavior Intended for courses in the philosophy of mind psychology and science as well as anthropology and social psychology this anthology is also of great value in courses focusing on folk models eliminative materialism explanation psychological theory and in particular intentional psychology It is accessible to both graduate students and upper division undergraduate students of philosophy and psychology as well as researchers As an aid to students a thorough discussion of the field and the articles in the anthology is provided in the introduction as an aid to researchers a complete bibliography is also provided

Computational Architectures Integrating Neural and Symbolic Processes Ron Sun, Lawrence A. Bookman, 2007-08-19 Computational Architectures Integrating Neural and Symbolic Processes A Perspective on the State of the Art focuses on a currently emerging body of research With the reemergence of neural networks in the 1980s with their emphasis on overcoming some of the limitations of symbolic AI there is clearly a need to support some form of high level symbolic processing in connectionist networks As argued by many researchers on both the symbolic AI and connectionist sides many cognitive tasks e g language understanding and common sense reasoning seem to require high level symbolic capabilities How these capabilities are realized in connectionist networks is a difficult question and it constitutes the focus of this book Computational Architectures Integrating Neural and Symbolic Processes addresses the underlying architectural aspects of the integration of neural and symbolic processes In order to provide a basis for a deeper understanding of existing divergent approaches and provide insight for further developments in this field this book presents 1 an examination of specific architectures grouped together according to their approaches their strengths and weaknesses why they work and what they predict and 2 a critique comparison of these approaches Computational Architectures Integrating Neural and Symbolic Processes is of interest to researchers graduate students and interested laymen in areas such as cognitive science artificial intelligence computer science cognitive psychology and neurocomputing in keeping up to date with the newest research trends It is a comprehensive in depth introduction to this new emerging field 50 years after the perceptron, 25 years after PDP: Neural computation in language sciences Julien Mayor, Pablo Gomez, Franklin Chang, Gary Lupyan, 2014-08-11 This Research Topic aims to showcase the state of the art in language research while celebrating the 25th anniversary of the tremendously influential work of the PDP group and the 50th anniversary of the perceptron Although PDP models are often

the gold standard to which new models are compared the scope of this Research Topic is not constrained to connectionist models Instead we aimed to create a landmark forum in which experts in the field define the state of the art and future directions of the psychological processes underlying language learning and use broadly defined We thus called for papers involving computational modeling and original research as well as technical philosophical or historical discussions pertaining to models of cognition We especially encouraged submissions aimed at contrasting different computational frameworks and their relationship to imaging and behavioral data

Information Structure and Sentence Form Knud Lambrecht, 1996-11-13 Why do speakers of all languages use different grammatical structures under different communicative circumstances to express the same idea Professor Lambrecht explores the relationship between the structure of the sentence and the linguistic and extra linguistic context in which it is used His analysis is based on the observation that the structure of a sentence reflects a speaker's assumption about the hearer's state of knowledge and consciousness at the time of the utterance This relationship between speaker assumptions and formal sentence structure is governed by rules and conventions of grammar in a component called information structure Four independent but interrelated categories are analysed presupposition and assertion identifiability and activation topic and focus
