Review of NASA Plans for the International Space Station National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Review of NASA Strategic Roadmaps: Space Station Panel, 2006-05-05 In January 2004 President Bush announced a new space policy directed at human and robotic exploration of space In June 2004 the President s Commission on Implementation of United States Space Exploration Policy issued a report recommending among other things that NASA ask the National Research Council NRC to reevaluate space science priorities to take advantage of the exploration vision Congress also directed the NRC to conduct a thorough review of the science NASA is proposing to undertake within the initiative In February 2005 the NRC released *Science in NASA s Vision for Space Exploration* the first report of the two studies undertaken to carry out these requests The second report focuses on NASA s plan for the ISS This report provides broad advice on programmatic issues that NASA is likely to

face as it attempts to develop an updated ISS utilization plan It also presents an assessment of potentially important research and testbed activities that may have to be performed on the ISS to help ensure success of some exploration objectives

Plasma Physics of the Local Cosmos National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Solar and Space Physics, 2004-06-06 Solar and space physics is the study of solar system phenomena that occur in the plasma state Examples include sunspots the solar wind planetary magnetospheres radiation belts and the aurora While each is a distinct phenomenon there are commonalities among them To help define and systematize these universal aspects of the field of space physics the National Research Council was asked by NASA s Office of Space Science to provide a scientific assessment and strategy for the study of magnetized plasmas in the solar system This report presents that assessment It covers a number of important research goals for solar and space physics The report is complementary to the NRC report *The Sun to the Earth and Beyond A Decadal Research Strategy for Solar and Space Physics* which presents priorities and strategies for future program activities *Recapturing a Future for Space Exploration* National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2012-01-30 More than four decades have passed since a human first set foot on the Moon Great strides have been made in our understanding of what is required to support an enduring human presence in space as evidenced by progressively more advanced orbiting human outposts culminating in the current International Space Station ISS However of the more than 500 humans who have so far ventured into space most have gone only as far as near Earth orbit and none have traveled beyond the orbit of the Moon Achieving humans further progress into the solar system had proved far more difficult than imagined in the heady days of the Apollo missions but the potential rewards remain substantial During its more than 50 year history NASA s success in human space exploration has depended on the agency s ability to effectively address a wide range of biomedical engineering physical science and related obstacles an achievement made possible by NASA s strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA which are all the more remarkable given budgetary challenges and changing directions within the agency In the past decade however a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development of advanced human exploration capabilities Although its review has left it deeply concerned about the current state of NASA s life and physical sciences research the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and

engineering program can achieve successes that will bring the space community the U S public and policymakers to an understanding that we are ready for the next significant phase of human space exploration The goal of this report is to lay out steps and develop a forward looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight thereby enabling the U S space program to deliver on new exploration initiatives that serve the nation excite the public and place the United States again at the forefront of space exploration for the global good *Space Studies Board Annual Report 2010* National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, 2011-01-01 The Space Studies Board SSB was established in 1958 to serve as the focus of the interests and responsibilities in space research for the National Academies The SSB provides an independent authoritative forum for information and advice on all aspects of space science and applications and it serves as the focal point within the National Academies for activities on space research It oversees advisory studies and program assessments facilitates international research coordination and promotes communications on space science and science policy between the research community the federal government and the interested public The SSB also serves as the U S National Committee for the International Council for Science Committee on Space Research COSPAR This volume reviews the organization activities and reports of the SSB for the year 2010 **The Astrophysical Context of Life** National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Origins and Evolution of Life, 2005-06-25 In 1997 the National Aeronautics and Space Administration NASA formed the National Astrobiology Institute to coordinate and fund research into the origins distribution and fate of life in the universe A 2002 NRC study of that program Life in the Universe An Assessment of U S and International Programs in Astrobiology raised a number of concerns about the Astrobiology program In particular it concluded that areas of astrophysics related to the astronomical environment in which life arose on earth were not well represented in the program In response to that finding the Space Studies Board requested the original study committee the Committee on the Origins and Evolution of Life to examine ways to augment and integrate astronomy and astrophysics into the Astrobiology program This report presents the results of that study It provides a review of the earlier report and related efforts a detailed examination of the elements of the astrobiology program that would benefit from greater integration and augmentation of astronomy and astrophysics and an assessment of ways to facilitate the integration of astronomy with other astrobiology disciplines Space Studies Board Annual Report 2014 National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, 2015-04-10 The original charter of the Space Science Board was established in June 1958 3 months before the National Aeronautics and Space Administration NASA opened its doors The Space Science Board and its successor the Space Studies Board SSB have provided expert external and independent scientific and programmatic advice to NASA on a continuous basis from NASA s inception until the present The SSB has also provided such advice to other executive branch
