identification and characterisation of key locations in the early medieval Welsh landscape a multidisciplinary dataset allows effective identification of focal zones through indicators known from other areas of north west Europe Fourthly the widely used multiple estate model is found to be an inadequate descriptor of the early medieval Welsh landscape An alternative approach is proposed Methodologically it demonstrates the value of a multidisciplinary approach especially the systematic use of place names which is novel in a Welsh context It also provides key resources for other researchers by geolocating pre 1700 place names from a previously published survey creating GIS resources polygons and geolocated databases from the 1840s tithe map and schedules for parishes in its detailed case study areas and providing a geolocated database of 16th century demesne and Welsh law landholdings in the cantref
