Assessing Children's Well Being:

Assessing Children's Well-Being Sylvie Naar-King, Deborah A. Ellis, Maureen A. Frey, Michele Lee Ondersma, 2003-10-17 Behavioral medicine has now matured as a field to the point where all recognize that different populations are presented with different issues Psychological reactions and patterns affect the health and well being of children as well as adults and numerous standardized instruments for the assessment of a variety of areas of children's functioning are currently available Yet it can be difficult for practitioners and researchers searching through general compendia of resources for child assessment which are frequently focused on general techniques rather than specific instruments to identify the optimal ones to meet their particular needs and to choose among them This practical and comprehensive reference guide is the first to sort present and review all the measures that can be used to evaluate the behavioral cognitive and emotional aspects of children's health It organizes the measures under eight general headings such as quality of life adherence pain management and patient satisfaction Each chapter begins with a leading authority's overview of the underlying theoretical construct and any concerns about how to measure it Descriptions and reviews of relevant instruments follow these include information on administration scoring psychometric properties and ordering as well as comments by the instruments developers **Assessing Children's Well Being** A Handbook of Measures will be welcomed by all those professionals and scientists who seek to assess and effectively address the complex interactions between physical health and mental health in children

The Biological and Social Determinants of Child Development Susan H. Landry, 2003 The Biological and Social Determinants of Child Development stimulates cross disciplinary communication and research collaboration in the field of child development While the papers in this issue seem diverse in terms of topic and discipline there are a number of common themes critical period for brain development and the importance of specific environmental input during this period importance of early brain development and enriched environments is supported in articles describing findings from human studies potential for brain plasticity following specialized retraining is found in a compelling paper demonstrating different profiles of brain activation for normal readers vs those who have dyslexia and younger children at

high risk for development of reading disabilities and critical period brain plasticity and parallel changes in developing behavior and brain structure and functioning As a number of papers in this issue describe potential interventions one is relevant because it describes the numerous factors that make results of such studies have the potential to generalize to larger populations Putting the described papers in a broad perspective the last article argues that we cannot understand the health status of a society without understanding the health determining influences across the life course
