Metallomics Yasumitsu Ogra, Takafumi Hirata, 2017-03-01 This book focuses on recent topics in metallomics a study of the metalloids or metal containing biomolecules Metals can induce various physiological and toxicological effects in a very small amounts in other words the concentrations of biometals are very low in organisms Thus analytical techniques for a trace amount of metal are crucial to understand the biological and toxicological functions of metals This volume begins with an overview of metallomics including the history and development of the field Subsequent parts provide basic and advanced techniques for metallomics Speciation and imaging of metals are basic approaches to reveal the function of the metalloids The applications of speciation using an HPLC hyphenated with inductively coupled plasma mass spectrometry LC ICP MS and flow cytometry ICP MS are described As advanced approaches the applications using a micro flow injection ICP MS an ICP triple quadrupole mass spectrometer an ICP sector field mass spectrometer and an ICP multi collector mass spectrometer are mentioned For the imaging of metals basic principles and applications of several techniques such as scanning X ray fluorescence microscopy and ICP MS equipped with laser ablation LA ICP MS are presented Speciation analyses using electrospray ionization mass spectrometry ESI MS X ray Absorption Spectroscopy XAS and nuclear magnetic resonance spectroscopy NMR are also introduced The last part highlights the medical and pharmaceutical applications of metallomics Molecular biological approaches to reveal the effects of toxic metals metal

functions in brain and neurodegenerative diseases and metallo drugs are explained The topic of metal transporters is also presented

Mayhan,Denise M. Arrick,2016-12-15 The blood brain barrier BBB is a complex and dynamic structure that protects the brain from cells within the vasculature from the immune system and from pathogens This barrier is present in arterioles capillaries and venules and is formed at the level of adjacent endothelial cells which are coupled to astrocytes microglia neurons and pericytes The structure of this endothelial barrier is unique among endothelia of other organ systems and is composed of complexes made up of tight gap and adherens junctions In addition it is the responsibility of the surrounding cellular elements to maintain the integrity of the junctional complexes and restrict the entry of substances from the blood into the brain Changes in permeability of the BBB during physiologic and pathophysiologic conditions involve alterations in specific transporters at the level of the endothelium activation of specific cellular second messenger pathways and or the dissolution of the junctional complexes composing the BBB This book focuses on various aspects that account for the formation and maintenance of the BBB and on disease states that compromise this barrier *The Blood-brain Barrier in*
