Spiritual practices or awakenings have an impact on brain, mind, and personality. These changes are

being scientifically predicted and proven For example studies show Buddhist priests and Franciscan nuns at the peak of religious feelings show a functional change in the lobes of their brain Similar processes have been found in people with epilepsy which Hippocrates called the sacred disease New research is showing that not only does a person s brain activity change in particular areas while that person is experiencing religion epiphany but that such events can be created for some people even self professed atheists by stimulating various parts of the brain It is not the goal of neurotheology to prove or disprove the existence of God but to understand the biology of spiritual experiences Such experiences seem to exist outside of time and space caused by the brain losing its perception of a boundary between physical body and outside world Understanding why this is the case could help explain other intangible events such as altered states of consciousness possession supposed alien visitations near death experiences and out of body events Understanding how and why these abilities evolved in the brain could also help us understand how religion contributes to the survival of the human race *The London Mercury* ,1922 **In Those Days** Harvey Fergusson,1929 A panorama of the Southwest built around the life of a pioneer who comes in the days of wagon trains and lives on into contemporary times *How to Catch a Star - A Guide to Chasing Dreams* Jason Pavelchak,Stephen Vaughn,2014-10-21 He didn t know it until he looked up but when Max finally figures out there is a star just for him he is determined to hold onto it Join Max on his adventure to find his passion his grit and a team that can help him go after his star Through it all discover what it takes to chase your dreams and overcome your obstacles The Social Basis of Consciousness Trigant Burrow,1927 *Mad Wives and Island Dreams* Philip Gabriel,J.
