This new book provides an introductory text on the science and technology of materials in automotive engines. It focuses on reciprocating engines both four and two stroke with particular emphasis on their characteristics and the materials used in their construction. The book considers the engine in terms of each specific part: the piston, cylinder, camshaft, valves, crankshaft, connecting rod, and catalytic converter. It also covers the metallurgy, surface modification, wear, resistance, and chemical composition of the materials considered, and it will include supplementary notes that support the core text. The book will be essential reading for engineers and designers of engines as well as lecturers and graduate students in the fields of combustion engineering, machine design, and materials science looking for a concise expert analysis of automotive materials.

Midwest **Automotive Technology** James D. Halderman, 2012. *Automotive Technology Principles, Diagnosis and Service* Fourth Edition meets the needs for a comprehensive book that covers all eight areas of automotive service plus the soft skills and tool knowledge that must also be taught. Because many automotive systems are intertwined, presenting all systems together in one text makes it easier for the student to see how they are all connected. Topics are divided into 133 short chapters which makes it easier for instructors and students to learn and master the content.

Advanced Automotive Technologies: Annual Report to Congress, Fiscal Year 1996, 1998 **Automotive Engine Alternatives** Robert L. Evans, 2013-06-29. This book contains the proceedings of the International Symposium on Alternative and Advanced Automotive Engines held in Vancouver, B.C. on August 11 and 12, 1986. The symposium was sponsored by EXPO 86 and The University of British Columbia and was part of the specialized periods program of EXPO 86, the 1986 World's Fair held in Vancouver. Some 80 attendees were drawn from 11 countries representing the academic, automotive, and large engine communities. The purpose of the symposium was to provide a critical review of the major alternatives to the internal combustion engine. The scope of the symposium was limited to consideration of combustion engines so that electric power, for example, was not considered. This was not a reflection on the possible contribution which electric propulsion may make in the future but rather an attempt to focus the proceedings more sharply than if all possible propulsion systems had been considered. In this way, all of the contributors were able to participate in the sometimes lively discussion sessions following the presentation of each paper.
