**Automatic Generation and Execution of Specification-Based Test Cases in a Network Based Environment** ,2003 Automatic testing of software has always been of interest The concept has been receiving more and more attention in the software development climate of today e g agile software processes where managers and testers are being asked to turn around their products under shorter schedules and with smaller resources Automation is being looked at as a pathway to meet the product testing and delivery deadlines There are many research methods and tools as well as a number of commercial tools that automate test design generation and execution Some are specification based some are structure based and some are combinations of both However the current state of automation of software testing has problems These include design and maintainability of automation e g current methods may not track product changes in a cost effective way and test case suites do not always evolve easily and consistently generation of excessive number of test cases end user friendliness of the tool interfaces measurability of the test suite effectiveness and so on The goal of the work presented here is to study automation of efficient specification based test case design generation and execution The investigation focuses on the

principle known as pair wise testing Empirical evidence exists that shows that the technique can produce depending on the algorithm used test suites which are not only efficient in fault detection but also have a manageable size Objectives of the work were to a enhance and further asses the open source pair wise test case design tool developed previously by K C Tai and his students called PairTest b develop a prototype of an adaptable easy to use system for automatic execution of the PairTest test cases something that the original release of PairTest does not do in a setting here one tests network based systems and c assess usability of pair wise testing strategy and automation of testing in an industrial environment This work explicitly rec
