Attentive Brain Pb:

Winning the Brain Game (PB) Matthew E. May, 2016-05-27 Mindful thinking is the new competitive edge Science confirms the distinction between the biological brain and the conscious mind Each day a game of mind versus matter plays out on a field defined by the problems we must solve Most are routine and don't demand a more mindful approach It's when we're faced with more difficult challenges that our thinking becomes vulnerable to brain patterns that can lead us astray We leap to solutions that simply don't work We fixate on old mindsets that keep us stuck in neutral We overthink problems and make them worse We kill the ideas of others as well as our own Worse we keep doing these things over and over again naturally and instinctively But it doesn't have to be that way In *Winning the Brain Game* author and creative strategist Matthew E. May explains these and other fatal flaws of thinking catalogued over the course of ten years and hundreds of interactive creative sessions in which he gave more than 100,000 professionals a thought challenge based on a real case far less complex than their everyday problems Not only did less than 5% arrive at the best and most elegant solution but the solutions given were remarkably similar revealing seven observable problem-solving patterns that can block our best thinking Calling on modern neuroscience and psychology to help explain the seven fatal flaws May draws insights from some of the world's most innovative thinkers He then blends in a super-curated field-tested set of fixes proven through hundreds of creative sessions to raise our thinking game to a more mindful level Regardless of playing field mindful thinking is the new competitive advantage and the seven fixes are a magic set of tools for achieving it *Winning the Brain Game* will lead you to better decision-making higher levels of creativity clearer strategies and overall success in business work and life Matthew E. May is a five-time author and recognized thought leader on strategy and innovation A popular speaker facilitator and seminar leader he confidentially coaches executives artists and athletes and conducts custom thinking sessions for leading organizations all over the world *Aimard's Indian tales, ed. by P.B. Provides an authoritative overview of the ERP method the major ERP components and their analysis and important application domains Attention and consciousness in different senses Naotsugu Tsuchiya, Jeroen J. Van Boxtel, 2013-06-03

Although often used in everyday speech and in the scholarly literature selective attention and consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects e g focused and feature based attention Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining traction Scientific studies of consciousness concern the state or level of consciousness e g awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of consciousness or the phenomenology of perception With the increase in consciousness focused research there is a concomitant surge in research examining the relationship between attention and consciousness This relationship between attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined two sides of the same coin However recently substantial evidence has emerged that attention and consciousness are interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the relationship is Therefore we invite researchers from different camps to provide opinionated but balanced literature reviews Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views Even though attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one's own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities
