Test-Driven Development Lech Madeyski,2009-12-05 Agile methods are gaining more and more interest both in industry and in research Many industries are transforming their way of working from traditional waterfall projects with long duration to more incremental iterative and agile practices At the same time the need to evaluate and to obtain evidence for different processes methods and tools has been emphasized Lech Madeyski offers the first in depth evaluation of agile methods He presents in detail the results of three different experiments including concrete examples of how to conduct statistical analysis with meta analysis or the SPSS package using as evaluation indicators the number of acceptance tests passed overall and per hour and design complexity metrics The book is appropriate for graduate students researchers and advanced professionals in software engineering It proves the real benefits of agile software development provides readers with in depth insights into experimental methods in the context of agile development and discusses various validity threats in empirical studies

*Analysis and Quantification of Test Driven Development Approach* ,2002 Software industry is increasingly becoming more demanding on development schedules and resources Often software production deals with ever changing requirements and with development cycles measured in weeks or months To respond to these demands and still produce high quality software over years software practitioners have developed a number of strategies One of the more recent one is Test Driven Development TDD This is an emerging object oriented development practice that purports to aid in producing high quality software quickly TDD has been popularized through the Extreme Programming XP methodology TDD proponents profess that for small to mid size software the technique leads to quicker development of higher quality code Anecdotal evidence supports this However until now there has been little quantitative empirical support for this TDD claim The work presented in this thesis is concerned with a set of structured TDD experiments on very small programs with pair programmers Programmers were both students and professionals In each programmer category students and professionals one group used TDD and the other control group a waterfall like software development approach The experiments provide some interesting observations regarding TDD When TDD was used both student and professional TDD developers appear to achieve higher code quality as measured using functional black box testing The TDD

student pairs passed 16% more test cases while TDD professional pair passed 18% more test cases than their corresponding control groups. However, professional TDD developer pairs did spend about 16% more time on development. It was not established whether the increase in the quality was due to extra development time or due to the TDD development process itself. On the other hand, the student experiments were time limited. Both the TDD and the non TDD student programmers had to complete the assignment in 75 minutes. Professional programmers took ab
