Aging In The Designed Environment:

Aging in the Designed Environment Margaret Christenson, Ellen D Taira, 2014-04-08 Aging in the Designed Environment is the key sourcebook for physical and occupational therapists developing and implementing environmental designs for the aging. The physical environment remains one of the most overlooked areas in environmental design. In order to move beyond this status quo, persons responsible for planning elderly environments must develop a new understanding of ways in which their influence can improve the older adult's physical and mental functioning. Occupational and physical therapists, as well as other health care professionals, will benefit tremendously from the information presented in this unique volume. Designers, developers, and others with minimal health care background will also find a wealth of possibilities within Aging in the Designed Environment. Many concerns are dealt with in the book's five sections. The first section describes the implications that occur when there are changes in vision, hearing, taste, smell, touch, and the kinesthetic systems. Recommendations for environmental adaptation and modifications which may compensate for the changes in each of these systems are suggested. The second section stresses the relationship between behavior and environment. A variety of environmental attributes—comfort, privacy, accessibility, control, security, dignity—and their impacts are discussed along with information on ways that attributes can be incorporated into the living settings of older people. In section three, the focus is on the older person living independently in his or her own home, and section four covers exclusively the design and selection of chairs for older adults. New ways to assess and evaluate the home to promote independence beyond the traditional activities of daily living are addressed. The last section deals with redesigning the existing long-term care facility. The author examines some of the environmental conditions existing in specific facilities and provides recommendations to compensate for these circumstances.

Ageing and the Built Environment in Singapore Belinda Yuen, 2018-06-28 This book contains a collection of studies that have been conducted among older residents in Singapore. Different methods, from surveys to crowd sourcing, have been used to investigate the older adults' lived experiences and social participation in the residential environment. The findings reveal that older residents interact with the built environment in ways that reflect their changing capabilities and lifestyles. Since the built environment where we live and go can have an important impact on our daily lives, especially among older people, understanding these experiences and perceived needs is important to help older individuals age within their community.

The Handbook of Interior Design Jo Ann Asher Thompson, Nancy Blossom, 2015-02-09 THE HANDBOOK OF INTERIOR DESIGN The Handbook of Interior Design offers a compilation of current works that inform the discipline of interior design. These examples of design scholarship present a detailed overview of current research and critical thinking. The volume brings together a broad range of essays from an international group of scholars who represent the diversity of work in the field. Intended to engage those involved in the study and practice of interior design, the Handbook considers the connections

between theory research and practice that shape the field of interior design as well as the theoretical perspectives that inform the field It contains over thirty essays which together demonstrate the wide range of opinions and knowledge in the discipline grouped in sections to reflect key components of their content A close reading of the essays will uncover contradictory as well as supporting positions on aspects of interior design challenging the reader to think critically and develop a personal stance toward the subject

technology to a healthy built environment that builds upon the sustainable building movement. It provides an overall summary of the state of the art technologies that are applied in the built environment. The book covers a broad spectrum of smart technology categories ranging from dynamic operability, energy efficiency, self-regulating and self-learning systems, and responsive systems. The foreseeable challenges that are associated with smart technologies are discussed and outlined in the book. Firstly, this book provides a snapshot of state of the art smart technologies being applied in the built environment. It covers a broad spectrum of smart technology categories ranging from dynamic operability, energy efficiency, self-regulating and self-learning systems to responsive systems. Secondly, this book provides in-depth analysis of the four primary components of health: biological, physical, physiological, and psychological. Their effects on wellbeing and cognitive performance are introduced as well. Thirdly, it connects smart technologies to those health-influencing factors by reviewing three completed smart building projects. This book can also serve as a basis for education and discussion among professionals and students of diverse backgrounds who are interested in smart technologies, smart building, and healthy building. *Smart Technologies and Design for Healthy Built Environment* serves as the basis for education and discussions among professionals and students who are interested in smart technologies, smart building, and healthy building as it bridges the gap between smart technologies and a healthy built environment. The book also provides a foundation for anyone who is interested in the impact of smart technology on the health of built environment.

Age-Friendly Ecosystems Valerie Chang Greer, Linda S. Edelman, 2024-11-17. This compact book examines age-friendliness within the framework of age-friendly ecosystems and from a place-based approach, considering anchor institutions of neighborhoods, campuses, and health environments as sites uniquely positioned to catalyze age equity and inclusivity. Age-friendliness has grown from an idea into a social movement that recognizes the diversity of older adults and integrates research, policy, programming, and design practices. Compounding pressures of rapid aging, systemic ageism, and a growing disparity of resources compel us to rethink how we achieve equity in aging through the design of places and practices. Content for this book draws from a 2022 symposium, *Age-Friendly Communities as Platforms for Equity, Health, Wellness*. Contributors build upon the content shared through the symposium in order to examine how neighborhoods, campuses, and health environments are uniquely poised to support equity and to extend reach to historically marginalized populations of older adults. Ideas and experiences from national experts in aging, as well as real-world experiences and narratives shared by older adults, students, community stakeholders, and faculty researchers are presented through a place-based approach. Collectively, the voices in this book create a lens for empowering age-friendly ecosystems as environments for equitable aging by design. Among the topics covered: *Creating an Age-Friendly Environment Across the Ecosystem*, *Age-Friendliness as a Framework for Equity in Aging*, *Age-Friendly Voices in the Pursuit of an Age-Friendly Ecosystem*, *Age-Friendly Futures*, *Equity by Design*, *Age-Friendly Ecosystems*, *Environments for Equitable Aging by Design*. This book is written for people who are interested in understanding how the
