Mathematical Modeling and Optimization Tony Hürlimann,2013-03-14 Computer based mathematical modeling the technique of representing and managing models in machine readable form is still in its infancy despite the many powerful mathematical software packages already available which can solve astonishingly complex and large models On the one hand using mathematical and logical notation we can formulate models which cannot be solved by any computer in reasonable time or which cannot even be solved by any method On the other hand we can solve certain classes of much larger models than we can practically handle and manipulate without heavy programming This is especially true in operations research where it is common to solve models with many thousands of variables Even today there are no general modeling tools that accompany the whole modeling process from start to finish that is to say from model creation to report writing This book proposes a framework for computer based modeling More precisely it puts forward a modeling language as a kernel representation for mathematical models It presents a general specification for modeling tools The book does not expose any solution methods or algorithms which may be useful in solving models neither is it a treatise on how to build them No help is intended here for the modeler by giving practical modeling exercises although several models will be presented in order to illustrate the framework Nevertheless a short introduction to the modeling process is given in order to expound the necessary background for the proposed modeling framework

Modeling Languages in Mathematical Optimization Josef Kallrath,2004-02-29 This volume presents a unique combination of modeling and solving real world optimization problems It is the only book which treats systematically the major modeling languages and systems used to solve mathematical optimization problems and it also provides a useful overview and orientation of today s modeling languages in mathematical optimization It demonstrates the strengths and characteristic features of such languages and provides a bridge for researchers practitioners and students into a new world solving real optimization problems with the most advances modeling systems

Block-LU Update for Large-scale Linear Programming Stanford University. Department of Operations Research. Systems Optimization Laboratory,1990 Stable and efficient updates to the basis matrix factors are vital to the simplex method The best updating method depends on the machine in use and how the update is implemented For example the classical product form update can take advantage of the vector hardware on current supercomputers and this helps compensate for its well known drawbacks Conversely the method of Bartels and Golub performs well on conventional machines but is difficult to vectorize With vectorization in mind a method is examined based on the block LU factors of an expanding basis The partitioned matrix involved was introduced by Bisschop and Meeraus 1977 1980 The update itself was proposed by Gill Murray Saunders and Wright 1984 The main advantages of the bloc LU update are that it is stable it vectorizes well and compared to the product form update the nonzeros increase at about two thirds the rate The update has been incorporated into MINOS and tested on 30 large sparse linear programming problems Results are given from runs on the Cray Y MP jhd
