**Reproduction in New World Primates** J.P. Hearn, 2012-12-06 The New World primates are becoming widely used in scientific and medical work in fields from anthropology to zoology behaviour to urology They have unique attributes for studies in cancer infectious diseases genetics virology and reproduction However it is only now that their reproductive physiology is being clarified in any depth and this book is a first synthesis of that knowledge The nine authors involved in this project have presented an up to date account of the major New World species used in biological and medical science In addition to their distribution and conservation in the wild essential biological data from laboratory studies are presented on reproductive cycles gestation length seasonal breeding puberty and other factors The major applications of these species in research are explored Whenever possible research workers should steer away from using endangered species in their studies The New World monkeys used in research in any numbers are still fairly common in the wild yet their greatest advantages are in their small size and high fecundity This makes possible the establishment of self sustaining captive breeding colonies at a fraction of the time and cost necessary for the more conventional Old World laboratory primates Consequently the drain on wild stocks need not be extensive as only breeding nuclei should be necessary *Primal Images* Jerry Burchfield, 2004

**Reproductive Biology of South American Vertebrates** William C. Hamlett, 2012-12-06 South America is one of the few areas of the world that includes vast areas of as yet undisturbed natural habitats These areas are home to as many as half the world's species of plants and animals Many of the animals inhabiting these areas are of direct and immediate economic importance while others are of unknown potential value With economic development of these areas there is a coincident disruption of natural habitats that have a direct impact on the reproductive capabilities of the affected species Reproduction is central to the survival of all species and regardless of the environmental stresses imposed on them scientific attention must be focused on reproductive biology as a way to deal with these pressures It is vitally important to gather as much research data as possible on the reproductive biology of the species on this continent in order to provide governmental agencies and scientists with the most accurate information on which to base decisions regarding development This volume is intended to draw attention to these pressing matters by gathering a wide representation of scientists actively engaged in reproduction research relating to South American vertebrates It is intended that this volume will serve as a resource for individuals and organizations interested in reproductive biology and species survival An additional benefit is that economically important species as well as potentially important ones such as sharks will be discussed

**Amazonian Caboclo Society** Stephen Nugent, 2021-01-06 Amazonian Caboclo Society is concerned with peasant society in Brazilian Amazonia Most anthropological work in Amazonia has focused on Indian groups and caboclos peasants of mixed ancestry have generally been regarded as relics of the haphazard development of Amazonia and have received little

serious attention This volume aims to analyze the reasons for the relative invisibility of caboclo society It traces the development of caboclo societies and argues that much of the current discussion of sustainable development fails to recognize the important legacy of historical caboclo society
