China's Economic Development Cai Fang, 2022-10-20 Cai Fang is one of China's most distinguished economists. This book elucidates the worldwide significance of China's economic development over the past 70 years from the perspectives of economic history and growth theory. The Chinese economy has undergone an unprecedented period of growth and development since the reform and opening up in the late 1970s, a process which the hallmarks of neoclassic economic theory have often proved inadequate to explain. Examining the Chinese economy in the light of Chinese history and the development of the world economy as a whole, the book charts the milestones and critical reforms of China's economic development, providing insights into unique attributes as well as more generic patterns. The discussion covers multiple hot topics in the field, including the so-called Great Divergence, dual sector economic development, real world experience of the reform and opening up, rural reform, urbanization, economic reform, poverty reduction, the latter day slowdown of China's economic growth, and China's role in and response to globalization, global supply domination, and other headwinds. The book will be a must read for students, scholars, and general readers interested in the Chinese economy, economic development, political economy, and development economics.

In the first volume, the author distinguishes between economic growth and sustainable economic development and discusses China's current and past economic policies towards growth. Chapters also explore the structural transformation of China's economy and its increasingly consumer oriented nature. The second volume looks more specifically at the result of domestic policies on the quality of life for people living in China. The author examines the distribution of income, the alleviation of poverty, the Chinese education system, and the environmental cost of economic growth. These volumes will be of particular interest to researchers and scholars concerned with China's emerging economic power.

The Rise of China and Structural Changes in Korea and Asia Takatoshi Ito, Chin Hee Hahn, 2010-01-01 This book brings together studies conducted by researchers in East Asian countries

who seek to better understand the impact of China's rise and the consequent policy challenges. The expert contributors illustrate that the rise of China and its integration with the rest of the world is one of the most important developments in the global economy. Over the past thirty years or so, China's economy has grown at nearly ten percent per annum with the expansion of the modern export-oriented industrial sector to become the third largest economy in the world and the second largest in trade. This book reviews the economic growth of East Asian countries since the 1990s and the various impacts that the rise of China has had on these countries. In particular, it addresses policy challenges faced in coping with the rise of China and maintaining economic growth. This timely book will strongly appeal to academics and researchers focusing on East Asia and China as well as those interested in international trade development and economic growth.

Structural Change and Economic Development in China and India Donatella Saccone, Vittorio Valli, 2009. The comparison of the periods of rapid economic growth in China since 1978 and India since 1992 markedly show different patterns of development and structural change. However, both countries experienced some of the advantages of relative economic backwardness and some aspects of the Fordist model of growth. China had an anticipated and deeper structural change spurred mainly by economic reforms and the growth of the internal market in the 1980s and since the mid-1990s by a very rapid penetration of its industrial products in the world market. However, a substantial part of its exports in medium and high-tech sectors are due to joint ventures with foreign multinationals. India had a more balanced structural change and a slower insertion in the world market, although some sectors such as software, steel, automotive, and pharmaceuticals are recently increasing their share in the world markets.

Structure and Structural Change in China's Economy Dong Guo, 2005. *The Synergy Theory on Economic Growth: Comparative Study Between China and Developed Countries* Jianhua Liu, Zhaohua Jiang, 2018-09-21. The book constructs the Synergy Theory, a new theory of economic growth and calculation methodology. The book involves empirical comparative study on economic growth between China and the 14 developed countries and, on the basis of the synergy theory, divides GDP into labor compensation, capital income, and synergistic benefits. Further, it establishes the new empirical model including the major determined factors of economic growth such as growth of physical capital stock, growth of investment in physical capital, improvement of science and technology, improvement of human capital quality, labor force growth, institutional innovation, and economic externalities. Subsequently, it uses the method of Data Envelopment Analysis to calculate the contribution of institutional innovation to economic growth and it also focuses on the analysis of the determining factors of economic growth. Based on the analysis above, the new theory has been tested, and the countermeasures and suggestions

involving China's innovation driven economy have been proposed China's Economic Development and the Role of Foreign-funded Enterprises, 2003 *China's Economic Modernisation and Structural Changes* Jessica Loon, 2019 *How China Grows* James Riedel, Jing Jin, Jian Gao, 2023-06-06 Why investment and financial reform are essential to China's continued economic well being Although China's economy has grown spectacularly over the last twenty five years economists disagree about how the Chinese economy is likely to fare in the short and long term future Is China's growth sustainable or has China relied too much on investment which is subject to diminishing returns and not enough on technological change The first book on the relation between investment finance and growth in China *How China Grows* dismisses this concern James Riedel Jing Jin and Jian Gao argue that investment has not only been the engine of growth but also the main source of technological progress and structural change in China What threatens future growth instead the authors argue are the weaknesses of China's financial system that undermine efficiency in investment allocation Financial sector reform and development are necessary not only for sustaining long term growth but also for maintaining macroeconomic stability Although it includes some technical economic analysis *How China Grows* is accessible to noneconomists and will benefit anyone who is interested in development finance in general and in China's economic growth in particular whether economists political scientists bankers or business people
