**Cause and Correlation in Biology** Bill Shipley, 2002-08 This book goes beyond the truism that correlation does not imply causation and explores the logical and methodological relationships between correlation and causation It presents a series of statistical methods that can test and potentially discover cause effect relationships between variables in situations in which it is not possible to conduct randomised or experimentally controlled experiments Many of these methods are quite new and most are generally unknown to biologists In addition to describing how to conduct these statistical tests the book also puts the methods into historical context and explains when they can and cannot justifiably be used to test or discover causal claims Written in a conversational style that minimises technical jargon the book is aimed at practising biologists and advanced students and assumes only a very basic knowledge of introductory statistics

**Causality for Artificial Intelligence** Jordi Vallverdú, 2024-06-28 How can we teach machine learning to identify causal patterns in data This book explores the very notion of causality identifying from a naturalistic and evolutionary perspective how living systems deal with causal relationships At the same time using this knowledge to identify the best ways to apply such biological models in machine learning scenarios One of the more fundamental challenges for AI experts is to design machines that can understand the world identifying the basic rules that govern reality Statistics are powerful and fundamental for this process but they are only one of the necessary tools Counterfactual thinking is the other part of the necessary process that will help machines to become intelligent This book explains the paths that can lead to algorithmic causality It is essential reading for those who are not afraid of thinking at the interface of various academic disciplines or fields AI machine learning philosophy neuroscience anthropology psychology computer sciences and who are interested in the analysis of causal thinking and the ways in which cognitive systems natural or artificial can act in order to understand their environment Professor Vallverdú is currently working on biomimetic cognitive architectures and multicognitive systems His research has explored two main areas epistemology and cognition Since his early Ph D research on epistemic controversies he has analyzed several aspects of computational epistemology His latest research has focused on the causal challenges of machine learning techniques particularly deep learning One of his most promising advances is statistics meets causal graph reasoning via Directed Acyclic Graphs which still has several conceptual paths that need to be explored and identified Counterfactual reasoning is a fundamental part of these open debates which are under the analysis of Prof Vallverdú His current research is supported as part of the following projects GEHUCT and ICREA Acad mia

Exploratory Causal Analysis with Time Series Data James M. McCracken, 2022-06-01 Many scientific disciplines rely on observational data of systems for which it is difficult or impossible to implement controlled experiments Data analysis techniques are required for identifying causal information and relationships directly from such observational data This need has led to the development of many different time series causality approaches and tools including transfer entropy convergent cross mapping CCM and Granger causality statistics A practicing analyst can explore the literature to find many proposals for identifying drivers and causal connections in time series data sets Exploratory causal analysis ECA provides a framework for exploring potential causal structures in time series data sets and is characterized by a myopic goal to determine which data series from a given set of series might be seen as the primary driver In this work ECA is used on several synthetic and empirical data sets and it is found that all of the tested time series causality tools agree with each other and intuitive notions of causality for many simple systems but can provide conflicting causal inferences for more complicated systems It is proposed that such disagreements between different time series causality tools during ECA might provide deeper insight into the data than could be found otherwise

**Quantitative Geosciences: Data Analytics, Geostatistics, Reservoir Characterization and Modeling** Y. Z. Ma, 2019-07-15. Earth science is becoming increasingly quantitative in the digital age. Quantification of geoscience and engineering problems underpins many of the applications of big data and artificial intelligence. This book presents quantitative geosciences in three parts. Part 1 presents data analytics using probability, statistical, and machine learning methods. Part 2 covers reservoir characterization using several geoscience disciplines, including geology, geophysics, petrophysics, and geostatistics. Part 3 treats reservoir modeling, resource evaluation, and uncertainty analysis using integrated geoscience, engineering, and geostatistical methods. As the petroleum industry is heading towards operating oil fields digitally, a multidisciplinary skillset is a must for geoscientists who need to use data analytics to resolve inconsistencies in various sources of data, model reservoir properties, evaluate uncertainties, and quantify risk for decision making. This book intends to serve as a bridge for advancing the multidisciplinary integration for digital fields. The goal is to move beyond using quantitative methods individually to an integrated descriptive quantitative analysis. In big data, everything tells us something, but nothing tells us everything. This book emphasizes the integrated multidisciplinary solutions for practical problems in resource evaluation and field development.

This makes it clear how the methods build on each other and gradually more and more information can be extracted from the data. The Excel functions used are explained in detail; the procedure can be easily transferred to other data sets. Various didactic elements facilitate orientation and working with the book. At the checkpoints, the most important aspects from each chapter are briefly

summarized In the freak knowledge section more advanced aspects are addressed to whet the appetite for more All examples are calculated with hand and Excel Numerous applications and solutions as well as further data sets are available on the author s internet platform This book is a translation of the original German 2nd edition Statistik angewandt mit Excel by Franz Kronthaler published by Springer Verlag GmbH Germany part of Springer Nature in 2021 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors
