Agent Intelligence Through Data Mining:

Agent Intelligence Through Data Mining Andreas L. Symeonidis, Pericles A. Mitkas, 2006-05-06 Knowledge hidden in voluminous data repositories routinely created and maintained by today's applications can be extracted by data mining. The next step is to transform this discovered knowledge into the inference mechanisms or simply the behavior of agents and multi-agent systems. Agent Intelligence Through Data Mining addresses this issue as well as the arguable challenge of generating intelligence from data while transferring it to a separate possibly autonomous software entity. This book contains a methodology, tools and techniques and several examples of agent-based applications developed with this approach. This volume focuses mainly on the use of data mining for smarter, more efficient agents. Agent Intelligence Through Data Mining is designed for a professional audience of researchers and practitioners in industry. This book is also suitable for graduate-level students in computer science.

Intelligent Agents for Data Mining and Information Retrieval Mohammadian, Masoud, 2003-07-01 There is a large increase in the amount of information available on World Wide Web and also in number of online databases. This information abundance increases the complexity of locating relevant information. Such a complexity drives the need for improved and intelligent systems for search and information retrieval. Intelligent agents are currently used to improve the search and retrieval information on World Wide Web. The use of existing search and retrieval engines with the addition of intelligent agents allows a more comprehensive search with a performance that can be measured. *Intelligent Agents for Data Mining and Information Retrieval* discusses the foundation as well as the practical side of intelligent agents and their theory and applications for web data mining and information retrieval. The book can be used for researchers at the undergraduate and post-graduate levels as well as a reference of the state of art for cutting-edge researchers.

Agents and Data Mining Interaction Longbing Cao, A.E. Gorodetsky, Jiming Liu, Gerhard Weiß, Philip S. Yu, 2009-07-30 The 2009 International Workshop on Agents and Data Mining Interaction (ADMI 2009) was a joint event with AAMAS 2009. In recent years, agents and data mining interaction (ADMI) or agent mining for short has emerged as a very promising research field. Following the success of ADMI 2006 in Hong Kong, ADMI 2007 in San Jose and ADMI 2008 in Sydney, the ADMI 2009 workshop in Budapest provided a premier forum for sharing research and engineering results as well as potential challenges and prospects encountered in the synergy between agents and data mining. As usual, the ADMI workshop encouraged and promoted theoretical and applied research and development which aims at exploiting agent-driven data mining and demonstrating how intelligent agent technology can contribute to critical data mining problems in theory and practice. Improving data mining-driven agents and showing how data mining can strengthen agent intelligence in research and practical applications, exploring the integration of agents and data mining toward a super-intelligent information processing and systems, identifying challenges and directions for future research on the synergy between agents and data mining. ADMI 2009 featured two invited talks and twelve selected papers. The first invited talk was on

Agents and Data Mining in Bioinformatics with the second focusing on Knowledge Based Reinforcement Learning The ten accepted papers are from seven countries A majority of submissions came from European countries indicating the boom of ADMI research in Europe In addition the two invited papers addressed fundamental issues related to agent driven data mining data mining driven agents and agent mining applications The proceedings of the ADMI workshops will be published as part of the LNAI series by Springer We appreciate the support of Springer and in particular Alfred Hofmann Autonomous Intelligent Systems: Agents and Data Mining Vladimir Gorodetsky, Jiming Liu, Victor A. Skormin, 2005-05-30 This book constitutes the refereed proceedings of the International Workshop on Autonomous Intelligent Systems Agents and Data Mining AIS ADM 2005 held in St Petersburg Russia in June 2005 The 17 revised full papers presented together with 5 invited papers and the abstract of an invited talk were carefully reviewed and selected from 29 submissions The papers are organized in topical sections on agent based data mining issues ontologies and Web mining and applications and case studies

Yu, 2011-12-18 This book constitutes the thoroughly refereed post workshop proceedings of the 7th International Workshop on Agents and Data Mining Interaction ADMI 2011 held in Taipei Taiwan in May 2011 in conjunction with AAMAS 2011 the 10th International Joint Conference on Autonomous Agents and Multiagent Systems The 11 revised full papers presented were carefully reviewed and selected from 24 submissions The papers are organized in topical sections on agents for data mining data mining for agents and agent mining applications Introduction to Agent Mining Longbing Cao, Chengqi Zhang, Zili Zhang, 2012-02-26 Multiagent systems and data mining have emerged as two of the most vigorous areas for building intelligent information technology This book presents the synergy between these fields along with the methodologies techniques algorithms and systems that integrate these technologies It highlights the effectiveness and power of agent driven data mining algorithms in designing intelligent data mining methods data mining driven agent intelligence enhancement and mutual challenges faced by both communities Detailed case studies demonstrate the mutual enhancement of the integration while the impact of new problems and challenges shows future trends in information technology as a whole

Data Mining and Multi-agent Integration Longbing Cao, 2009-07-25 Data Mining and Multi agent Integration aims to reflect state of the art research and development of agent mining interaction and integration for short agent mining The book was motivated by increasing interest and work in the agents data mining and vice versa The interaction and integration comes about from the intrinsic challenges faced by agent technology and data mining respectively for instance multi agent systems face the problem of enhancing agent learning capability and avoiding the uncertainty of self organization and intelligence emergence Data mining if integrated into agent systems can greatly enhance the learning skills of agents and assist agents with predication of future states thus initiating follow up action or intervention The data mining community is now struggling with mining distributed interactive and heterogeneous data sources Agents can be used to manage such data

sources for data access monitoring integration and pattern merging from the infrastructure gateway message passing and pattern delivery perspectives These two examples illustrate the potential of agent mining in handling challenges in respective communities There is an excellent opportunity to create innovative dual agent mining interaction and integration technology tools and systems which will deliver results in one new technology
