Aging Human Longevity:

Aging and Human Longevity M.-F. Schulz-Aellen,2012-12-06 The proportion of elderly people continues to increase in the western world nearly a quarter of the population will be over 65 years by the year 2050 Since aging is accompanied by an increase in diseases and by a deterioration in well being finding solutions to these social medical and psychological problems is necessarily a major goal for society Scientists and medical practitioners are therefore faced with the urgent task of increasing basic knowledge of the biological processes that cause aging More resources must be put into this research in order to achieve better understanding of the cellular mechanisms that underlie the differences in life span between species and to answer the difficult questions of why some individuals age more quickly than others and why some develop liver problems some have heart problems and others brain problems The results of such a wide program of research will provide important information about the causes of many life threatening and or debilitating diseases of old age it will help find ways to prevent some of the ailments that result from aging and it may well lead to discoveries enabling the prolongation of human life

Human Longevity David W. E. Smith,1993 This absorbing balanced account of human longevity draws together information from the fields of medicine biology demography epidemiology gerontology and sociology It describes the history and present status of human longevity and deals in logical sequence with the questions this subject raises The book illustrates how life expectancy has increased in most countries due in part to changing causes of death It examines the biological determinants of longevity

and analyzes social and behavioral factors that may reduce longevity The book covers the reasons why women live longer than men It asks why the maximum human life span is nearly twice that of any other warm blooded animal and much longer than required for reproductive success and it discusses factors that were involved in the evolution of longevity It presents predictable increases in human life expectancy and explores the possibility that the maximum human life expectancy may become even longer Accessible comprehensive and original this book provides a multidisciplinary synthesis of ideas and conclusions about human longevity It will have wide appeal to professionals in the many areas concerned with longevity as well as lay readers *Biomedical Index to PHS-supported Research* ,1990 **Aging and Human Longevity**

Marie-Françoise Schulz-Aellen,1997 This book combines a scientific and medical description of aging with a critical review of ways to prolong life The first part gives an overview of the complex biological mechanisms of aging and of the consequences of tissue and system aging in humans The role of genetic and environmental factors that influence the rate of aging in several species is discussed The second part of this book evaluates the various means including life styles behavioral variables medical interventions and vitamin supplementation that may slow down the physiological and psychological effects of aging Biotechnology and gene therapy are also becoming a part of medical interventions to prolong life This book is aimed at readers with some knowledge of biology and medicine as well as to a larger audience eager to know more about how to live a healthy happy and productive life in their old age Human Aging Research Barbara Kent,Robert N.
