Aging Slowly

Mark Gerzon

Aging Slowly:

Sex and Longevity: Sexuality, Gender, Reproduction, Parenthood J.-M. Robine, T.B.L. Kirkwood, M.

Allard, 2012-12-06 A central concept in the evolutionary theory of senescence is the idea that ageing results from life history trade offs. In particular, the disposable soma theory suggests that longevity is determined through the setting of longevity assurance mechanisms so as to provide an optimal compromise between investments in somatic maintenance including stress resistance and in reproduction. Comparative studies among mammalian species confirm that cells from long lived species appear to have a greater intrinsic capacity to withstand stresses than cells from short lived species. Childbearing at older ages has become increasingly common in modern societies because of demographic changes, medical progress and personal choice. While the detrimental effects of late reproduction on infant mortality and genetic diseases have been well documented, little is known about the possible postponed detrimental effects of late parenting. [Listening to Midlife](#) Mark

Gerzon, 1996-03-05 Based on interviews with a wide variety of men and women and research on the literature of adult development, Mark Gerzon answers the question: Is it possible that human beings experience a profound metamorphosis in midlife with a resounding yes. [IMF Staff papers](#) International Monetary Fund, Research Dept., 1987-01-01 In the middle of 1985, Argentina and Israel launched frontal attacks on inflation which succeeded in reducing it drastically during the first year without very significant costs in employment and output. Despite basic differences in the countries' structures, the programs were similar in their design and their effects. This paper covers some of these similarities in the implementation and the results of the two stabilization programs and analyzes the rationale of the underlying conception of the plans. The focus is on the strategy for the transitional period and the ability of the programs to sustain price stability. **The**

Molecular Genetics of Aging Siegfried Hekimi, 2000-04-05 The molecular genetics of aging or life span determination is an expanding field. One reason is because many people would consider it desirable if human life span could be extended. Indeed, it is difficult not to be fascinated by tales of the life and death of people who have succeeded in living a very long life. Because of this, we have placed at the head of this book the chapter by Perls et al. on Centenarians and the Genetics of Longevity. Perls and his coauthors convincingly argue that while the average life expectancy might be mostly determined by environmental factors, because the average person has an average genotype, extremely long life spans are genetically determined. Of course, studying humans to uncover the genetics of aging is not ideal, not so much because one cannot easily perform experiments as because they live such a long time. This is why most of this book describes the current state of research with model organisms such as yeast, worms, flies, and mice. Jaswinski focuses on yeast and how metabolic activity and stress resistance affect the longevity of *Saccharomyces cerevisiae*. In the process, he discusses the concept of aging as applied to a unicellular organism such as yeast and the importance of metabolism and stress resistance for aging in all organisms. [Political Theory on Death and Dying](#) Erin A. Dolgoy, Kimberly Hurd Hale, Bruce Peabody, 2021-09-14 [Political Theory on Death and Dying](#) provides a
