Aging And Cell Function:

Aging and Cell Function John Johnson,2014-01-15 *Metabolic Modulation of Cellular Function* ,2024-03-26 Metabolic pathways and their metabolites are gaining recognition as both sensitive biomarkers for pathological conditions and key modulators of cell fate In the past metabolic changes were considered a consequence of gene expression metabolite control or environmental changes such as starvation However extensive research in the last decade has demonstrated that metabolic changes respond to and influence cellular signaling This crosstalk between metabolism and cellular signaling is mainly enabled by novel metabolite mediated modulation of enzymatic activity of rate limiting steps and post translational and epigenetic modifications for which metabolites serve as substrates *Adipose Tissue: Which Role in Aging and Longevity?* Antonello Lorenzini,Aurelia Santoro,Daniela Monti,2020-09-18 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin.org about contact **Times, Cells, and Aging** Bernard Strihler,1977-01-28 Time Cells and Aging 2nd Edition presents the mechanics of cell function and the relevant implications of the molecular genetic view to the aging phenomena This book explores the biology of the aging process Comprised of 11 chapters this edition starts with an overview of the causes and mechanisms underlying the gradual deterioration of structure and function characteristics of aging This text then examines the two aspects of the behavior of man including the reasoned conscious behavior and the greater dependence on reaction patterns predicted on the successful responses of the past Other chapters explore the relationship between aging and mortality rate in animals which is a result of an organism s decreasing ability to function optimally in carrying out his vital functions The final chapter deals with the implementation of a research plan relevant to understanding the primary mechanisms of the aging process This book is a valuable resource for gerontologists biologists and molecular biologists Role of Inflammation in Neurodegenerative Diseases Maya Koronyo-Hamaoui,Sally Ann Frautschy,Jorge Ivan Alvarez,2022-07-13 **Biomedical Index to PHS-supported Research** ,1990 **Neuroregulatory Mechanisms in Aging** Maynard H. Makman,George B. Stefano,1993 Aging and its associated problems are of increasing interest and concern as the life expectancy of the human population increases The importance of continued functioning of the nervous system in cognitive and integrative processes necessary for maintaining the quality of life during aging is self evident The nature and extent of the changes that occur with increasing age different considerably in different species and also in the various organs or tissues within a given species emphasis on normal aging as it applies to the nervous systems of man and other mammals as well as to certain invertebrates

Changes in human brain function due to Alzheimer's disease are considered in addition to changes that may occur with normal human aging. The potential involvement of immunocytes in age-associated disorders is also discussed. Nervous system generally due to aging from molecular, pharmacological, electrophysiological, and behavioral perspectives. This book emphasizes the attempts of recent research to understand the basic mechanisms for these changes as well as their functional consequences and provides important insight into our understanding of the aging process and the consequences of these changes for neuronal function. Topics considered include neuropeptides, systems in aging including opioids and analgesic, cholinergic and aminergic systems, neuroendocrinology, and neuroimmunology.
