Chinas Changing Population:

China's Changing Population Judith Banister, 1987 In this comprehensive analysis of thirty five years of population change in the People's Republic of China the author highlights China's shifting population policies and pieces together the available data assessing and adjusting them as necessary in order to discover the actual population changes [The Changing Population of China](#) Dr. Xizhe Peng, Dr. Zhigang Guo, 2000-10-03 In this book top Chinese demographers introduce the reader to Chinese population policy assess its effects and project future consequences In the last three decades the Chinese have conducted the greatest demographic experiment in human history They have sought to curb the growth of their vast population through the implementation of rigid population policy and programmes Whilst helping to keep the population from spiralling out of control the policy has also had unwanted consequences including an imbalance of males to females and the weakening of family kinship and old age support networks This book provides a background to the policy by introducing Chinese history society and geographical population distribution The contributors then examine the relation between policy culture and population in the past and present and project current trends into the future The book discusses a wide range of socio economic impacts on China's demographic dynamics such as employment social welfare and urbanization The book's conclusion extrapolates these trends into longer term population projections *General Report of China's Changing Population and Its Development* Cangping Wu, 1997 *Transition and Challenge* Zhongwei Zhao, Fei Guo, 2007-02-22 With the largest population in the world China has experienced significant demographic social and economic changes in recent decades Extraordinary demographic changes took place in China in the second half of the twentieth century having wide ranging consequences This book written by a group of leading experts examines these profound changes in an effort to understand their long term impact and provide an up to date account of China's demographic reality The volume provides a comprehensive and authoritative analysis of a wide range of issues such as China's unprecedented family planning program the impact of falling birth rates coupled with increasing life expectancy changes in marriage patterns and increasing rural urban migration Anyone who is interested in China and its recent demographic changes will benefit from the rich materials and thorough analysis provided in this book *Analysing China's Population* Isabelle Attané, Baochang Gu, 2014-10-06 Based on China's recently released 2010 population census data this edited volume analyses the most recent demographic trends in China in the context of significant social and economic upheavals The editor and the expert contributors describe the main features of China's demography and focus on the details of this latest phase of its demographic transition The book explores such striking characteristics of China's demography as the changing age and sex population structure recent trends in marriage and divorce fertility trends with a focus on sex imbalance at birth the demography of the ethnic minorities and recent mortality trends by sex *Analysing China's Population Social Change in a New Demographic Era* examines and assesses the impact of changes that in the coming decades will be crucial for individuals and the larger society and economy of the

nation *Governing China's Population* Susan Greenhalgh, Edwin A. Winckler, 2005 *Governing China's Population* tells the story of political and cultural shifts from the perspectives of both regime and society

The Hope of the Country with a Large Population Xueyuan Tian, 2014-01-24 China has the largest population in the world However according to the United Nations India and China are expected to simultaneously reach a population of approximately 1.38 billion by 2030 with India taking a slight lead China will be all too happy to surrender its position as the country with the largest population Where does this attitude come from For China this situation is symbolic of the solution to the excessive population and a milestone in the Three Stage population development strategy as well as the people's hope In order to realize this hope it firstly depends on the transformation from the previous high birth rate high death rate and low growth rate of population to a high birth rate low death rate and high growth rate and finally to a low birth rate low death rate and low growth rate It also relies on the post demographic transition to a low fertility level since the 1990s and secondly is closely related to the population change in the future Therefore in depth studies on population and the development of population resources environment economy and society should be conducted on the basis of fresh experiences and theories from the international community in order to move forward with the times to promote the solution to the population problem and realize the dream of rejuvenating the Chinese nation As a result population change is linked to this great rejuvenation as the great rejuvenation requires the population change and in turn the population change facilitates the great rejuvenation

Malaria in Colonial South Asia Sheila Zurbrigg, 2019-08-28 This book highlights the role of acute hunger in malaria lethality in colonial South Asia and investigates how this understanding came to be lost in modern medical epidemic and historiographic thought Using the case studies of colonial Punjab Sri Lanka and Bengal it traces the loss of fundamental concepts and language of hunger in the inter war period with the reductive application of the new specialisms of nutritional science and immunology and a parallel loss of the distinction between infection transmission and morbid disease The study locates the final demise of the Human Factor hunger in malaria history within pre and early post WW2 international health institutions the International Health Division of the Rockefeller Foundation and the nascent WHO's Expert Committee on Malaria It examines the implications of this epistemic shift for interpreting South Asian health history and reclaims a broader understanding of common endemic infection epidemiology as a prime driver in the context of subsistence precarity of epidemic mortality history and demographic change This book will be useful to scholars and researchers of public health social medicine and social epidemiology imperial history epidemic and demographic history history of medicine medical sociology and sociology

Population in China Nancy E. Riley, 2017-01-30 China is home to a fifth of the world's inhabitants For the last several decades this huge population has been in flux fertility has fallen sharply mortality has declined and massive rural to urban migration is taking place The state has played a direct role in these changes seeing population control as an important part of its intention to modernize the country In this insightful new work Nancy E Riley argues that China's population policies and

outcomes are not simply imposed by the state onto an unresponsive citizenry but have arisen from the social organization of China over the past sixty years. Riley demonstrates how China's population and population policy are intertwined and interact with other social and economic features. Riley also examines the unintended consequences of state directives including the extraordinary number of missing girls, the rapid aging of the population, and an increase in inequality, particularly between rural and urban residents. Ultimately, China's demographic story has to be understood as a complex, multi-pieced phenomenon. This book will be essential reading for researchers and students of China and social demography, as well as non-specialists interested in the changing nature of China's population.

Welfare Changes in China During the Economic Reforms Aiguo Lu, 1996. *Welfare Changes in China during the Economic Reforms* examines the welfare changes in China during the reform period which began in 1978, a process of large-scale socio-economic transformation accompanied by rapid economic growth.

Cheng, 2002. *Seaports of the Far East* Allister Macmillan, 1923. **China Digest**, 1930. **China's Future in a Changing World** Valerie Seward, 1991. With the legacy of the Tiananmen Square uprising still hanging heavily over China and great change occurring in Eastern Europe, China's political and economic structures have come under great pressure. This report, based on a conference at Wilton Park, examines China's position in the international community, its internal policies and problems, and its role within Asia.

Contemporary Demographic Transformations in China, India and Indonesia Christophe Z. Guilmoto, Gavin W. Jones, 2015-12-12. This book examines the profound demographic transformation affecting China, India, and Indonesia, where 40% of the world's people live. It offers a systematic comparative approach that will help readers to better understand the changing social and regional recomposition of the population in these regions. The chapters present a detailed investigation and mapping of regional trends in mortality, fertility, migration, and urbanization, education, and aging. Throughout the analysis, carefully considers how these trends affect economic and social development. Coverage also raises global theoretical questions about the singular ways in which each of these three countries has achieved their demographic transition. As the authors reveal, demographic trends seem to be somewhat linear and anticipatable, providing Asia's three demographic giants and their governments a formidable advantage in planning for the future. But the evolution of human mobility in China, India, and Indonesia, closely intertwined as it is with changing economic conditions, appears less predictable and ranks high among the major challenges to demographic knowledge in the coming decades. Offering an insightful look into the components, implications, and regional variations of a changing population, this book will appeal to social scientists, demographers, anthropologists, sociologists, epidemiologists, and specialists in Asian studies.
