Literacy in Science, Technology, and the Language Arts Mary Hamm, Dennis Adams, 1998-10-30 Technology a product of science is pushing against the linear boundaries of traditional storytelling Moving in the direction of multiform stories and digital formats takes literacy well beyond the 3Rs Students increasingly need to be critical and creative users of the new media As the Internet becomes faster more visually powerful and easier to manipulate there will be an explosion of virtual environments with literacy taking on a whole new meaning While the word literacy has become almost synonymous with the word competence the authors prefer the definitions found in the new language arts and science standards For example the National Science Education Standards suggests that scientific literacy implies that a person can identify scientific issues underlying national and local decisions and express positions that are scientifically and technologically informed As this book explores important new dimensions of linguistic and scientific literacy it looks at developing literacies not covered well in schools today It is the authors belief that an understanding of science and the processes of science can make major contributions to the ability to learn reason make decisions and solve problems Thus learning about the natural world helps develop intellectual tools of inquiry that can be used with the language arts and other

disciplines Interdisciplinary activities can help develop the skills in both science and language that are becoming so essential for personal fulfillment performing in the workplace and being an informed citizen This book is designed as a supplementary text for methods classes in elementary science and language arts education It is also intended as a resource and guide for preservice and inservice elementary and middle school teachers *Media and Literacy* Dennis M. Inquire Within Douglas Llewellyn, 2002 Addressing students misconceptions is a critical part of science teaching But how does one uncover and teach to these misconceptions A good place to start is *Inquire Within* which presents many valuable strategies for meeting this challenge National Science Teachers Association Washington The author teaches a method of learning in science that is inquiry based and that involves a process of asking questions exploring and making the connections that lead to understanding and discovery As students involve themselves in the process of inquiry they learn how to ask the kind of questions that determine the answers they need to help solve their scientific problems The reader is given simple step by step lessons on how to apply this method of learning to easy scientific experiments and then the author shows how to evaluate the students progress with monitoring charts rubrics and other assessment tools By using this method of inquiry students hone their decision making skills and find empowerment in applying these skills to become better students
