Hyperfunction theory (M. Sato, 1958)

- **hyperfunction** on an interval  $I$   
... the difference between the values of a complex analytic function  $F(z)$  on  $I$

$$f(x) = [F(z)] \equiv F(x + i0) - F(x - i0).$$

$F(z)$ : defining function of the hyperfunction  $f(x)$   
analytic in  $D \setminus I$ , where  $D$  is a complex neighborhood of  $I$

Applied Hyperfunction Theory Isao Imai, 2013-03-09 Generalized functions are now widely recognized as important mathematical tools for engineers and physicists But they are considered to be inaccessible for non specialists To remedy this situation this book gives an intelligible exposition of generalized functions based on Sato's hyperfunction which is essentially the boundary value of analytic functions An intuitive image hyperfunction vortex layer is adopted and only an elementary knowledge of complex function theory is assumed The treatment is entirely self contained The first part of the book gives a detailed account of fundamental operations such as the four arithmetical operations applicable to hyperfunctions namely differentiation integration and convolution as well as Fourier transform Fourier series are seen to be nothing but periodic hyperfunctions In the second part based on the general theory the Hilbert transform and Poisson Schwarz integral formula are treated and their application to integral equations is studied A great number of formulas obtained in the course of treatment are summarized as tables in the appendix In particular those concerning convolution the Hilbert transform and Fourier transform contain much new material For mathematicians mathematical physicists and engineers whose work involves generalized functions Journal of Mathematics ,2001 Journal of Mathematics Tokushima Daigaku,2001
