Applied Probability Computer Science Volume 2:

Applied Probability-Computer Science: The Interface Volume 1 Ralph L. Disney, Teunis J. Ott, 2013-03-07 These two volumes are the Proceedings of the first special interest meeting instigated and organized by the joint Technical Section and College in Applied Probability of ORSA and THIS This meeting which took place January 5 7 1981 at Florida Atlantic University in Boca Raton Florida had the same name as these Proceedings Applied Probability Computer Science the Interface The goal of that conference was to achieve a meeting of and a cross fertilization between two groups of researchers who from different starting points had come to work on similar problems often developing similar methodologies and tools One of these groups are the applied probabilists many of whom consider their field an offspring of mathematics and who find their motivation in many areas of application The other is that group of computer scientists who over the years have found an increasing need in their work for the use of probabilistic models The most visible area of common methodology between these two groups is networks of queues Hhich by itself could have been the theme of an entire conference FunctionQl areas which are or are becoming sources of exciting problems are computer performance analysis data base analysis analysis of communication protocols data networks and mixed voice data telephone networks The reader can add to this list by going through the papers in these Proceedings

Applied Probability-Computer Science: The Interface Volume 1 R.L. Disney, T.J. Ott, 1983-01-01 *Coding, Cryptography and Combinatorics* Keqin Feng, Harald Niederreiter, Chaoping Xing, 2004-06-25 It has long been recognized that there are fascinating connections between coding theory cryptology and combinatorics Therefore it seemed desirable to us to organize a conference that brings together experts from these three areas for a fruitful exchange of ideas We decided on a venue in the Huang Shan Yellow Mountain region one of the most scenic areas of China so as to provide the additional inducement of an attractive location The conference was planned for June 2003 with the official title Workshop on Coding Cryptography and Combinatorics CCC 2003 Those who are familiar with events in East Asia in the first half of 2003 can guess what happened in the end namely the conference had to be cancelled in the interest of the health of the participants The SARS epidemic posed too serious a threat At the time of the cancellation the organization of the conference was at an advanced stage all invited speakers had been selected and all abstracts of contributed talks had been screened by the program committee Thus it was decided to call on all invited speakers and presenters of accepted contributed talks to submit their manuscripts for publication in the present volume Altogether 39 submissions were received and subjected to another round of refereeing After careful scrutiny 28 papers were accepted for publication

Boolean Functions and Computation Models Peter Clote, Evangelos Kranakis, 2013-03-09 The foundations of computational complexity theory go back to Alan Turing in the 1930s who was concerned with the existence of automatic procedures deciding the validity of mathematical statements The first example of such a problem was the undecidability of the Halting Problem which is essentially the question of debugging a computer program Will a given

program eventually halt Computational complexity today addresses the quantitative aspects of the solutions obtained Is the problem to be solved tractable But how does one measure the intractability of computation Several ideas were proposed A Cobham Cob65 raised the question of what is the right model in order to measure a computation step M Rabin Rab60 proposed the introduction of axioms that a complexity measure should satisfy and C Shannon Sha49 suggested the boolean circuit that computes a boolean function However an important question remains What is the nature of computation In 1957 John von Neumann vN58 wrote in his notes for the Silliman Lectures concerning the nature of computation and the human brain that logics and statistics should be primarily although not exclusively viewed as the basic tools of information theory Also that body of experience which has grown up around the planning evaluating and coding of complicated logical and mathematical automata will be the focus of much of this information theory The most typical but not the only such automata are of course the large electronic computing machines *Applied Probability-computer Science: the Interface*, 1982

Stochastic Analysis of Computer and Communication Systems Hideaki Takagi, 1990 Analytical techniques for evaluating the performance of computer and communication systems have evolved hand in hand with the progress in these systems since the late 1960 s and an enormous amount of knowledge has been accumulated in this interplay of applied mathematics and computer science This book includes nineteen lengthy surveys of the state of the art of performance evaluation techniques and an extensive bibliography The topics include stochastic processes and queueing theory applied to performance analysis and performance models of computer systems and communication networks Articles have been contributed by leading scientists from five continents *Performance Modeling for Computer Architects* C. M. Krishna, 1995-10-14 As computers become more complex the number and complexity of the tasks facing the computer architect have increased Computer performance often depends in complex way on the design parameters and intuition that must be supplemented by performance studies to enhance design productivity This book introduces computer architects to computer system performance models and shows how they are relatively simple inexpensive to implement and sufficiently accurate for most purposes It discusses the development of performance models based on queueing theory and probability The text also shows how they are used to provide quick approximate calculations to indicate basic performance tradeoffs and narrow the range of parameters to consider when determining system configurations It illustrates how performance models can demonstrate how a memory system is to be configured what the cache structure should be and what incremental changes in cache size can have on the miss rate A particularly deep knowledge of probability theory or any other mathematical field to understand the papers in this volume is not required *Applied Probability— Computer Science: The Interface* Ralph L. Disney, Teunis J. Ott, 1982-01-01 **SIAM Journal on Computing** Society for Industrial and Applied Mathematics, 1987 *Design of Modern Communication Networks* Christofer Larsson, 2014-03-05 *Design of Modern Communication Networks* focuses on methods and algorithms related to the design of communication networks using

optimization graph theory probability theory and simulation techniques The book discusses the nature and complexity of the network design process then introduces theoretical concepts problems and solutions It demonstrates the design of network topology and traditional loss networks followed by uncontrolled packet networks flow controlled networks and multiservice networks Access network design is reviewed and the book concludes by considering the design of survivable reliable networks and various reliability concepts A toolbox of algorithms The book provides practical advice on implementing algorithms including the programming aspects of combinatorial algorithms Extensive solved problems and illustrations Wherever possible different solution methods are applied to the same examples to compare performance and verify precision and applicability Technology independent Solutions are applicable to a wide range of network design problems without relying on particular technologies
