Applied Stochastic Processes G. Adomian,2014-05-09 *Applied Stochastic Processes* is a collection of papers dealing with stochastic processes stochastic equations and their applications in many fields of science One paper discusses stochastic systems involving randomness in the system itself that can be a large dynamical multi input multi output system Examples of a large system are the national economy of a major country or when an acoustic wave is propagating as in the atmosphere ocean or sea Another paper proves that only the average properties of the molecules of biology can be measured with precision in the test tube and disputes a simplistic model of the cell as defined by a miniature Laplace's universe The paper notes that the way existing cells are constructed implies that quantum mechanical principles lead to certain questions about simple experiments having only statistical answers Another paper addresses the detection of distributed fluctuating targets in a reverberation limited randomly time and space varying transmission media This approach is done by using the concepts of random Green's functions and the stochastic Green's function The collection will prove useful for cellular researchers mathematicians physicist engineers and academicians in the field of applied mathematics statistics and chemistry
