   Discrete Event Systems, Manufacturing Systems, and Communication Networks P.R. Kumar,P.P. Varaiya,2012-12-06 This IMA Volume in Mathematics and its Applications DISCRETE EVENT SYSTEMS MANUFACTURING SYSTEMS AND COMMUNICATION NETWORKS is based on the proceedings of a workshop that was an integral part of the 1992 93 IMA program on Control Theory The study of discrete event dynamical systems DEDS has become rapidly popular among researchers in systems and control in communication networks in manufacturing and in distributed computing This development has created problems for re searchers and potential consumers of the research The first problem is the veritable Babel of languages formalisms and approaches which makes it very difficult to determine the commonalities and distinctions among the competing schools of approaches The second related problem arises from the different traditions paradigms values and experience that scholars bring to their study of DEDS depending on whether they come from control com munication computer science or mathematical logic As a result intellectual exchange among scholars becomes compromised by unexplicated assumptions The purpose of the Workshop was to promote exchange among scholars representing some of the major schools of thought in DEDS with the hope that 1 greater clarity will be achieved thereby and 2 cross fertilization will lead to more fruitful questions We thank P R Kumar and P P Varaiya for organizing the workshop and editing the proceedings We also take this opportunity to thank the National Science Foundation and the Army Research Office whose financial support made the workshop possible A vner Friedman Willard Miller Jr   A Class and Object Library for Parallel Discrete Event Simulation Lin Shiow-Fen Huang,1998   A Class and Object Library for Parallel Discrete Event Simulation Lin Shiow-Fen Huang,1998   Manufacturing Systems Engineering Katsundo Hitomi,2017-10-19 This second edition of the classic textbook has been written to provide a completely up to date text for students of mechanical industrial manufacturing and production engineering and is an indispensable reference for professional industrial engineers and managers In his outstanding book Professor Katsundo Hitomi integrates three key themes into the text manufacturing technology production management industrial economics Manufacturing technology is concerned with the flow of materials from the acquisition of raw materials through conversion in the workshop to the shipping of finished goods to the customer Production management deals with the flow of information by which the flow of materials is managed efficiently through planning and control techniques Industrial economics focuses on the flow of production costs aiming to minimise these to facilitate competitive pricing Professor Hitomi argues that the fundamental purpose of manufacturing is to create tangible goods and it has a tradition dating back to the prehistoric toolmakers The fundamental importance of manufacturing is that it facilitates basic existence it creates wealth and it contributes to human happiness manufacturing matters Nowadays we regard manufacturing as operating in these other contexts beyond the technological It is in this unique synthesis that Professor Hitomi s study constitutes a new discipline manufacturing systems engineering a system that will promote

Simulation Modelling Practice and Theory Evon M. O. Abu-Taieh,Asim Abdel Elsheikh Ahmed,2019 The influx of data in the world today needs analysis that no one method can handle Some reports estimated the influx of data would reach 163 zitabytes by 2025 hence the need for simulation and modeling theory and practice Simulation and modeling tools and techniques are most important in this day and age While simulation carries the needed work tools for visualizing the results help in the decision making process Simulation ranges from a simple queue to molecular dynamics including seismic reliability analysis structural integrity assessment games reliability engineering and system safety This book will introduce practitioners researchers and novice users to simulation and modeling and to the world of imagination **Applications and Theory of Petri Nets 2003** Wil van der Aalst,Eike Best,2007-09-04 The refereed proceedings of the 24th International Conference on Applications and Theory of Petri Nets ICATPN 2003 held in Eindhoven The Netherlands in June 2003 The 25 revised full papers presented together with 6 invited contributions were carefully reviewed and selected from 77 submissions All current issues on research and development in the area of Petri nets are addressed in particular concurrent systems design and analysis model checking networking business process modeling formal methods in software engineering agent systems systems specification systems validation discrete event systems protocols and prototyping *Discrete Event Hybrid Systems in Robotics and Automation* Tarek M. Sobh,2006 The underlying mathematical representation of complex robotic and manufacturing computer controlled systems is still insufficient to create a set of models which accurately captures the dynamics of the system over the entire range of system operation We remain in a situation where we must trade of the accuracy of our models with the manageability of the models Closed form solutions of mathematical models are almost exclusively limited to linear system models Computer simulation of non linear hybrid and discrete event models provide a means for online design of robotic control systems Guarantees of system performance are limited to those regions where the robustness conditions apply These conditions may not apply during start up and shutdown or during periods of anomalous operation Attempts have been made to model low and high level system changes in automated and robotic systems as discrete event dynamic systems DEDS and hybrid systems Several attempts to improve modelling capabilities are focused on mapping the continuous world into a discrete one However repeated results are available which indicate that large interactive systems evolve into states where minor events can lead to a catastrophe Discrete event and hybrid systems have been used in the manufacturing and automation domains to model system state changes within a process Timed and untimed petri nets and state automata in addition to Markovian stochastic perturbation and other models have been used extensively
