Capabilitybased Computer Systems:

Capability-Based Computer Systems Henry M. Levy, 2014-05-16 *Capability Based Computer Systems* focuses on computer programs and their capabilities. The text first elaborates capability and object based system concepts including capability based systems, object based approach, and summary. The book then describes early descriptor architectures and explains the Burroughs B5000, Rice University Computer, and Basic Language Machine. The text also focuses on early capability architectures. Dennis and Van Horn's Supervisor, CAL TSS System, MIT PDP 1 Timesharing System, and Chicago Magic Number Machine are discussed. The book then describes Plessey System, 250 Cambridge CAP Computer, and Hydra System. The selection also discusses STAROS System and IBM System 38 STAROS object support and abstract type management, as well as IBM System 38 profiles and authority, and programs. Procedures are described. The book highlights Intel iAPX 432 and then considers segment and objects, program execution, storage resources, and abstraction support. Architecting Secure Software Systems Asoke K. Talukder, Manish Chaitanya, 2008-12-17 Traditionally, software engineers have defined security as a non-functional requirement. As such, all too often it is only considered as an afterthought, making software applications and services vulnerable to attacks. With the phenomenal growth in cybercrime, it has become imperative that security be an integral part of software engineering, so that

Advances in Computer Systems Architecture Thambipillai Srikanthan, Jingling Xue, Chip-Hong Chang, 2005-10-19 On behalf of the Program Committee, we are pleased to present the proceedings of the 2005 Asia Pacific Computer Systems Architecture Conference (ACSAC 2005) held in the beautiful and dynamic country of Singapore. This conference was the tenth in its series, one of the leading forums for sharing the emerging research findings in this field. In consultation with the ACSAC Steering Committee, we selected a member Program Committee. This Program Committee represented a broad spectrum of research expertise to ensure a good balance of research areas, institutions, and experience while maintaining the high quality of this conference series. This year's committee was of the same size as last year but had 19 new faces. We received a total of 173 submissions, which is 14% more than last year. Each paper was assigned

to at least three and in some cases four Program Committee members for review. Wherever necessary the committee members called upon the expertise of their colleagues to ensure the highest possible quality in the reviewing process. As a result we received 415 reviews from the Program Committee members and their 105 co-reviewers whose names are acknowledged in the proceedings. The conference committee adopted a systematic blind review process to provide a fair assessment of all submissions. In the end we accepted 65 papers on a broad range of topics giving an acceptance rate of 37.5%. We are grateful to all the Program Committee members and the co-reviewers for their efforts in completing the reviews within a tight schedule.
