Clinical Information Systems Bruce I. Blum,2012-12-06 As its name implies this book deals with clinical information systems The clinical information system or CIS is an automated system with a long term database containing clinical information used for patient care This definition excludes business systems no clinical data physiological monitoring systems no long term database and many research systems not used in patient care The theses of this book are a that CIS technology is mature b that the CIS will have a major impact upon patient care and the health delivery system and c that the number of commercial systems which now offer these potential benefits is very small The objective of this book is to establish the above theses and thereby a inform both users and developers b increase the demand for more sophisticated products and finally c

provide marketplace incentives to advance the state of the art The CIS is an application of computer technology for a specific class of problems Its development requires a knowledge of the technology with an understanding of the application area As with any tool based application the scope of the product will be limited by the capability of the tool In the case of the CIS reliable computers with comprehensive database facilities became commercially available in the early 1970s By the mid 1970s there was a maturation of the literature and evaluations of 5 years use began to appear As will be shown there have been surprisingly few new ideas introduced since the 1970s

Systems Helmuth F. Orthner, Bruce I. Blum, 2012-12-06 This series in Computers and Medicine had its origins when I met Jerry Stone of Springer Verlag at a SCAMC meeting in 1982 We determined that there was a need for good collections of papers that would help disseminate the results of research and application in this field I had already decided to do what is now Information Systems for Patient Care and Jerry contributed the idea of making it part of a series In 1984 the first book was published and thanks to Jerry s efforts Computers and Medicine was underway Since that time there have been many changes Sadly Jerry died at a very early age and cannot share in the success of the series that he helped found On the bright side however many of the early goals of the series have been met As the result of equipment improvements and the consequent lowering of costs computers are being used in a growing number of medical applications and the health care community is very computer literate Thus the focus of concern has turned from learning about the technology to understanding how that technology can be exploited in a medical environment
