Colors Of Space:

Color Space and Its Divisions Rolf G. Kuehni, 2003-04-28 It has been postulated that humans can differentiate between millions of gradations in color. Not surprisingly, no completely adequate detailed catalog of colors has yet been devised; however, the quest to understand, record, and depict color is as old as the quest to understand the fundamentals of the physical world and the nature of human consciousness. Rolf Kuehni's *Color Space and Its Divisions: Color Order from Antiquity to the Present* represents an ambitious and unprecedented history of man's inquiry into color order, focusing on the practical applications of the most contemporary developments in the field. Kuehni devotes much of his study to geometric, three-dimensional arrangements of color experiences, a type of system developed only in the mid-nineteenth century. Color spaces are of particular interest for color quality control purposes in the manufacturing and graphics industries. The author analyzes three major color order systems in detail: Munsell, OSA, UCS, and NCS. He presents historical and current information on color space developments in color vision, psychology, psychophysics, and color technology. Chapter topics include: A historical account of color order systems; Fundamentals of psychophysics and the relationship between stimuli and experience; Results of perceptual scaling of colors according to attributes; History of the development of mathematical color space and difference formulas; Analysis of the agreements and discrepancies in psychophysical data describing color differences; An experimental plan for the reliable, replicated perceptual data necessary to make progress in the field. Experts in academia and industry, neuroscientists, designers, art historians, and anyone interested in the nature of color will find *Color Space and Its Divisions* to be the authoritative reference in its field.

The Colors of Space Marion Zimmer Bradley, 2021-12-29 The book *The Colors of Space* has been considered important throughout human history, and so that this work is never forgotten, we have made efforts in its preservation by republishing this book in a modern format for present and future generations. This whole book has been reformatted, retyped, and designed. These books are not made of scanned copies, and hence the text is clear and readable.

Color, Space, and Creativity Jack Stewart, 2008 This study of Virginia Woolf, D. H. Lawrence, Joyce Cary, Lawrence Durrell, and A. S. Byatt focuses on color space and creativity in selected novels, stories, travel texts, essays, and letters. Stewart highlights a nexus of color space and creativity that takes on ontological dimensions in the writing of five writers who are linked by stylistic affinities and correspondingly calibrated sensibilities. They engage writing with painting, and their acts of attention converge in a zone where color space and creativity sustain the imaginative life world of their characters. This study should lead to ongoing reflections on the roles of color and space in modernist and postmodernist texts, and direct attention to the subtle and pervasive interactions of literature with painting.
