Firesmith, 1998 **Mastering the Requirements Process** Suzanne Robertson, James Robertson, 1999 Shelf category Software Engineering Mastering the Requirements Process Suzanne Robertson James Robertson Delivering the software that your customer really wants Mastering the Requirements Process and the Volere specification template are real breakthroughs They introduce the beginnings of science to a domain which had up till now been ruled by craft Tom DeMarco It is widely recognized that incorrect requirements account for up to 60% of errors in software products and yet the majority of software development organizations do not have a formal requirements process Many organizations appear willing to spend huge amounts on fixing and altering badly specified software but seem unwilling to invest a much smaller amount to get the requirements right in the first place This is a book for those who want to get the right requirements Mastering the Requirements Process sets out an industry tested process for gathering and verifying requirements It provides the techniques and insights for discovering precisely what the customer wants and needs Mastering the Requirements Process shows step by step template by template example by example one well tested way to assemble a complete comprehensive requirements process Gerald Weinberg The specification template in this book provides the basis for your own requirements specifications It guides you to the correct specification content as each part of the process reveals different aspects of the products functionality and properties This book shows you how to make the requirement measurable and testable By providing a measurement a fit criterion for each requirement the requirements analyst can describe precisely what the customer wants the designer can construct a product that exactly matches the requirement and the tester can determine whether or not the final solution satisfies the requirement The Robertsons concept of fit criteria is all by itself worth the investment of your time to read the whole book Fit criteria and the allied discipline of quality gateways enable you to build requirement sets that are measurable provably correct and testably complete Tom DeMarco Features 7 The Volere requirements process completely specified with a rigorous and detailed model 7 A specification template that can be used as the basis for your own requirements specifications 7 The requirements shell used for bringing rigor tracability and completeness to requirements 7 Checklists to help identify stakeholders users non functional requirements and more 7 Trawling techniques for eliciting requirements 7 How to exploit use cases to determine the best product to build 7 Reusing requirements and requirements patterns 7 Examples showing how the techniques and

templates are applied in real world situations 7 Accessible style fully cross referenced numerous diagrams The Authors Suzanne Robertson is a leading figure in the world of systems analysis and requirements modeling She is the roving ambassador for the British Computer Societys Reuse Group and is on organizing committees for the International Conference on Software Reuse and Object Technology James Robertson brings the experience of working and consulting on requirements with several hundred companies to this book When his busy seminar schedule permits James advises companies on how to adapt to a world where requirements are paramount Suzanne and James are principals of the Atlantic Systems Guild an international think tank producing numerous books and seminars that are among the most successful in the software industry Visit Addison Wesley Longman on the World Wide Web at <http://www.awl.com/computing> <http://www.com.cseng.com> BarcodeBack of Jacket **Software Blueprints** David S. Robertson,Jaume Agustí,1999 Conceptual models are descriptions of our ideas about a problem used to shape the implementation of a solution to it Everyone who builds complex information systems uses such models be they requirements analysts knowledge modellers or software designers but understanding of the pragmatics of model design tends to be informal and parochial Lightweight uses of logic can add precision without destroying the intuitions we use to interpret our descriptions Computing with logic allows us to make use of this precision in providing automated support tools Modern information scientists need to know what these methods are for and may need to build their own This book gives you a place to begin Where do you start when building models in a precise language like logic One way is by following standard paradigms for design and adapting these to your needs Some of these come from an analysis of existing informal notations Others are from within logic itself We take you through a sample of these from more commonplace styles of formal modelling to non standard methods such as techniques editing and argumentation Each of these provides a window onto broader areas of applied logic and gives you a basis for adapting the method to your own needs

**Xcode Tools Sensei (First Edition) , Agile Development in the Real World** Alan Cline,2015-12-28 This book is a practical guide for new agile practitioners and contains everything a new project manager needs to know to get up to speed with agile practices quickly and sort out the hype and dogma of pseudo agile practices The author lays out the general guidelines for running an agile project with the assumption that the project team may be working in a traditional environment using the waterfall model or something similar Agile Development in the Real World conveys valuable insights to multiple audiences For new to agile project managers this book provides a distinctive approach that Alan Cline has used with great success while showing the decision points and perspectives as the agile project moves forward from one step to the next This allows new agile project managers or agile coaches to choose between the benefits of agile and the benefits of other methods For the agile technical team member this book contains templates and sample project artifacts to assist in learning agile techniques and to be used as exemplars for the new practitioner s own project For the Project Management Office PMO the first three chapters focus on portfolio management They explain for the agilists benefit how projects are

selected and approved and why projects have an inherent shelf life that results in hard deadlines that may seem arbitrary to traditional technical teams

What You Will Learn

How and why the evolution of project management from PM 1 prescriptive to PM 2 adaptive affects modern 21st century project management

How sociology stakeholder management psychology team dynamics and anthropology organizational culture affect the way software is developed today and why it is far more effective

A clear delineation of what must to be accomplished by all the roles PM BA APM Developer and Tester why those roles are needed and what they must do

Step by step guide for a successful project based on studies and the author's own experiences

Specific techniques for each role on the development team both in the pre iteration and iteration cycles of product development

The appendices contain templates that the team could use or modify to tailor their own agile processes specific to the team project and organization

**Location Aware Apps for Tourism** Cathal Greaney, 2012-09-19

This book demonstrates the usefulness of the modern smartphone for providing location aware applications to the tourist as an end user

During the course of this book it has been demonstrated that the modern smartphone has the accuracy and responsiveness required to provide excellent location aware functionality to the tourist end user

The GPS section outlines how a developer can leverage this functionality to make apps that use close quarter location positioning to help the average tourist in a host of different ways

It has also been demonstrated that bluetooth and other technologies such as QR coding are effective at providing location aware functionality in situations where GNSS GPS is ineffective such as in indoor environments

Lastly the book outlines how an engineer could provide augmented location services when GPS is not available by using the RSSI signal from Bluetooth devices

**Informatics in Control, Automation and Robotics** Honghua Tan, 2012-02-01

Session 1 includes 109 papers selected from 2011 3rd International Asia Conference on Informatics in Control Automation and Robotics CAR 2011 held on December 24 25 2011 Shenzhen China

This session will act as an international forum for researchers and practitioners interested in the advances in and applications of Intelligent Control Systems

It is an opportunity to present and observe the latest research results and ideas in these areas

Intelligent control is a rapidly developing complex and challenging field of increasing practical importance and still greater potential

Its applications have a solid core in robotics and mechatronics but branch out into areas as diverse as process control automotive industry medical equipment renewable energy and air conditioning

So this session will aim to strengthen relationships between industry research laboratories and universities

All papers published in session 1 will be peer evaluated by at least two conference reviewers

Acceptance will be based primarily on originality and contribution
