Causal Modelling in Nonexperimental Research Willem E. Saris,L. H. Stronkhorst,L. Henk Stronkhorst,1984 Analysis of variance has become a major tool for causal analyses in experimental research Covariance structure analysis is increasingly taking this place in the nonexperimental sciences Apart from the data analysis itself the specification of models play a very important role in this approach This book introduces both aspects of covariance structure analysis In doing so an effort is made to link up the older path analysis approach which the new and more powerful LISREL approach All of the relevant aspects of the approach are covered at an introductory level The prior level of mathematical or statistical knowledge is very limited knowledge of some descriptions is convenient but no matrix algebra is required The procedures are illustrated by concrete data analyses using the LISREL computer program but the text does not depend on the use of this particular program

The Effect of Community Context on Intergenerational Spanish Maintenance and English Proficiency Among Latina and Latino Children Nancy Alison Garrett,1997 In this dissertation I investigate how community context affects Spanish language use and English proficiency among Latina and Latino children in the United States focusing on the children of immigrants I view children s language

attributes through a sociological perspective that recognizes that children learn and use languages within specific social and cultural contexts and that these contexts have an important effect on language acquisition and use This theoretical perspective leads to the hypothesis that children s language skills and language use will be affected by the communities they live in I predict that living in a metropolitan area with a greater propinquity and availability of Spanish speakers will increase a child s likelihood of speaking Spanish because this will increase opportunities for using and hearing Spanish and promote Spanish within a larger United States context that often devalues languages other than English At the same time I hypothesize that community context will have little effect on children s English skills because of the ubiquitous presence of English in the daily life of any U S child I test these hypotheses using a national sample of children who live in metropolitan areas drawn from the 1990 Census I find that levels of Spanish maintenance are extremely high among children of Latina o immigrants and that a large majority of children who are born in the U S speak English fluently Multivariate analysis demonstrates that several dimensions of a metropolitan area s language context in particular the saturation and segregation of Spanish speakers have a strong effect on second generation children s likelihood of speaking Spanish that persists even after controlling for household and individual level variables Contrary to my original hypothesis I also find that the language characteristics of the metropolitan area have a significant effect on children s English proficiency This effect however is smaller than the effect of metropolitan context on Spanish use This analysis produces a better understanding of the specific elements of household and community context that affect language use The results imply that children of immigrants are following multiple paths to language adaptation and that metropolitan context is an important influence on this process of adaptation

A. Reyment, 1991 For the first time a book is available which is devoted to the analysis of multidimensional variability in fossils and deals with the application of multivariate statistical methods to problems of palaeobiology Presents important new statistical methods for analysing particular problems occurring in biology Questions of ecology systematics quantitative genetics biostratigraphy and evolutionary biology amenable to quantitative analysis are fully considered This multivariate primer introduces new but little known methods in a practical format Methods for applying quantitative genetics to evolution in the phenotype appear with examples and caveats together with exercises and problems to expand and exemplify difficult concepts A computer programs supplement written in SAS IML is included which will enable readers to reproduce most of the tables in the text and continue to use them for actual further analysis or research purposes with a minimum of alteration A 5 25 or 3 50 disk is
