**Carbohydrate-protein Interaction**, 1979 **Carbohydrate-protein Interaction** Irwin Joseph Goldstein, American Chemical Society. Division of Carbohydrate Chemistry, 1979 **Carbohydrate-Protein Interaction** Adrienne E. Clarke, Ian A. Wilson, 2013-03-09 Carbohydrate as the primary product of photosynthesis has a vital role in the maintenance of life on this planet Until relatively recently interest in complex carbohydrates focussed on their structural role in the extracellular matrix cell wall of animal plant and microbial cells and on their role as energy sources e g starch and glycogen and structural components e g cellulose in natural products There was however indirect evidence that carbohydrates could play an informational role this evidence was from the finding last century that plant lectins caused specific agglutination of certain animal cells and more recently that the agglutination was mediated by interactions between the plant lectin and cell surface carbohydrates It is now clear that endogenous carbohydrate binding proteins are important in cell cell recognition phenomena in animal systems Recently impressive evidence has been presented that complex oligosaccharides derived from cell walls are also important in plant recognition events for example in signalling the defence mechanisms of a plant to respond to attack by insects and microbial pathogens Carbohydrate-Protein Interactions D. Wade Abbott, Wesley F. Zandberg, 2023-05-06 This second edition provides new and updated tools for studying protein carbohydrate interactions ranging from traditional biochemical methods to state of the art techniques This book focuses on four different research themes detailing methods for screening and quantifying CAZyme activity investigating the interactions between proteins carbohydrate ligands methods for the visualization of carbohydrates protein carbohydrate complexes structural and omic approaches for studying systems of CAZymes Written in the format of the highly successful *Methods in Molecular Biology* series each chapter includes an introduction to the topic lists necessary materials and methods includes tips on troubleshooting and known pitfalls and step by step readily reproducible protocols Authoritative and cutting edge *Carbohydrate Protein Interactions Methods and Protocols Second Edition* aims to be comprehensive guide for researchers in the field CH- $\pi$  Interactions Play a Central Role in Protein Recognition of Carbohydrates Roger Christopher Diehl, 2021 Carbohydrate protein interactions play a central role in biology but knowledge of the forces underlying them is limited Carbohydrates are generally hydrophilic and therefore present unique challenges in their recognition One underappreciated force involved in carbohydrate protein interactions is the CH  $\pi$  interaction an attractive interaction between the aliphatic protons of a carbohydrate and the  $\pi$  system of an aromatic ring In this thesis I examine the fundamental nature strength and biological significance of this interaction largely in the context of a family of carbohydrate binding proteins known as galectins In Chapter 1 I review previous knowledge of the forces underlying carbohydrate binding proteins and the forces they utilize to bind their ligands In particular I focus on CH  $\pi$  interactions and galectins In Chapter 2 I examine the forces that contribute to CH  $\pi$  interactions in the context of carbohydrates and aromatic compounds in aqueous solution I find the

CH pi interaction to be electronic in nature and demonstrate its selectivity between different carbohydrates In Chapter 3 I determine the contribution of the CH pi interaction to the ligand binding of galectin 3 a human carbohydrate binding protein of medical significance The data demonstrate that the CH pi interaction accounts for a majority of the binding energy In Chapter 4 I explore the biological implications of the CH pi interaction in galectin 3 I demonstrate that the CH pi interaction is critical for the biological activities of galectin 3 In Chapter 5 I propose several directions future researchers could take to extend this work For three of four directions I present the progress I have made during my studies The work contained within this thesis demonstrates that CH pi interactions play a central role in protein carbohydrate interactions at both a molecular level and a biological level Understanding the CH pi interaction is key to explaining and predicting the activity of carbohydrate binding proteins Carbohydrate- Protein Interaction Irwin J. Manning,1997 Protein-carbohydrate and Protein-protein Interactions Alain Teboho Laederach,2003 Any molecular recognition event results in a change in the free energy of the system The extent of this change is related to the association constant such that the more negative the free energy change is the tighter the interaction between receptor and ligand Protein carbohydrate interactions play a critical role in signal transduction innate immunity and metabolism Modeling these interactions is somewhat complicated by the inherent flexibility of carbohydrates as well as their relatively large number of functional groups An empirical scoring function for docking carbohydrates to proteins specifically tailored to predict both the correct binding orientation and free energy of binding of the carbohydrate ligand protein receptor complex will be presented This new scoring function can predict free energies of binding to within 1 kcal mol residual standard error a definite improvement over existing scoring functions that result in standard errors well over 2 kcal mol Application of automated docking methodology to determine carbohydrate recognition specificity of the C type lectin human surfactant protein D will also be presented In the second part of the thesis the role of pi stacking interactions e g between Tyr side chains in stabilizing protein folds will be discussed A 17 residue peptide derived from the naturally occurring anti microbial peptide tachyplesin I was investigated using NMR spectroscopy NOE cross peaks were observed confirming the existence of this interaction in solution In the final part of the thesis a quantitative NMR investigation into the self association behavior of the regulatory domains of several Tec family member kinases will be presented Of particular interest self association within Bruton s tyrosine kinase Btk regulatory domains occurs through the formation of an asymmetric homodimer Together this

work demonstrates the importance of rigorous biophysical characterization of biomolecular recognition events and the interdependence of computational modeling and experimentation Carbohydrate-protein Interactions Sai Kumar Ramadugu,2013 **Carbohydrates in Chemistry and Biology** Beat Ernst,Gerald W.
