

Differentiation from first principles

Practice using general formula
Find the gradient function for
 $f(x) = 20x^2 + 2x$, from first principles.

$$f(x) = 20x^2 + 2x$$
$$f(x+h) =$$

$$f(x) = 20x^2 + 2x$$

$$f(x+h) = 20(x+h)^2 + 2(x+h)$$

$$f(x+h) = 20(x+h)(x+h) + (2x+2h)$$

$$f(x+h) = 20(x^2 + 2xh + h^2) + 2x + 2h$$

$$f(x+h) = 20x^2 + 40xh + 20h^2 + 2x + 2h$$

$$f(x+h) = 20x^2 + 40xh + 20h^2 + 2x + 2h$$

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}, \quad h \neq 0$$

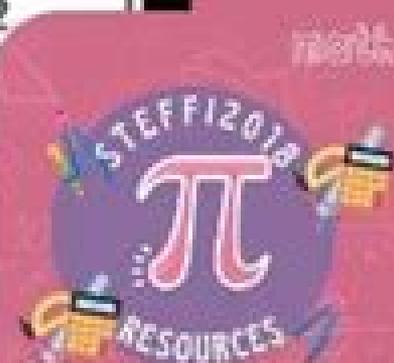

$$f'(x) = \lim_{h \rightarrow 0} \frac{(20x^2 + 40xh + 20h^2 + 2x + 2h) - (20x^2 + 2x)}{h}$$

$$f'(x) = \lim_{h \rightarrow 0} \frac{40xh + 20h^2 + 2h}{h}$$

$$f'(x) = \lim_{h \rightarrow 0} 40x + 20h + 2$$

$$\therefore f'(x) = 40x + 2$$

[Burchard de Volder and the Age of the Scientific Revolution](#)

Andrea Strazzoni,2019-11-18 This monograph details the entire scientific thought of an influential natural philosopher whose contributions unfortunately have become obscured by the pages of history Readers will discover an important thinker Burchard de Volder He was instrumental in founding the first experimental cabinet at a European University in 1675 The author goes beyond the familiar image of De Volder as a forerunner of Newtonianism in Continental Europe He consults neglected materials including handwritten sources and takes into account new historiographical categories His investigation maps the thought of an author who did not sit with an univocal philosophical school but critically dealt with all the major philosophers and scientists of his age from Descartes to Newton via Spinoza Boyle Huygens Bernoulli and Leibniz It explores

the way De Volder's un-systematic thought used rejected and re-shaped their theories and approaches. In addition, the title includes transcriptions of De Volder's teaching materials, disputations, dictations, and notes. Insightful analysis combined with a trove of primary source material will help readers gain a new perspective on a thinker so far mostly ignored by scholars. They will find a thoughtful figure who engaged with early modern science and developed a place that fostered experimental philosophy.

Manifest Activity Gideon Yaffe, 2004-03-25. *Manifest Activity* presents and critically examines Thomas Reid's doctrines about the model of human power, the will, our capacities for purposeful conduct, and the place of our agency in the natural world. Reid is one of the most important philosophers of the 18th century but hitherto underappreciated through the reconstruction of his arguments, many of which have never before been discussed. Gideon Yaffe demonstrates that Reid's simple prose and direct style belie the complexity of the views he advocates and the subtlety of the reasons he offers in their favour. For Reid, contrary to the view of many of his predecessors, it is simply manifest that we are active with respect to our behaviours; it is manifest he thinks that our actions are not merely remote products of forces that lie outside of our control. Reid holds instead that actions are all and only those events that spring from active power, and he produces insightful and imaginative arguments for the claim that only a creature with a mind is capable of having active power. He believes that only human beings and creatures above us are capable of directing events towards ends of endowing them with purpose or direction, the distinctive feature of action. However, he also holds that all events, and not merely human actions, are products of active power, power possessed either by human beings or by God. This collection of theses leads Reid to the view that human behaviour and the progress of nature are both essentially teleological. Patterns in nature are the products of laws of which God is the author; patterns in human conduct are the products of character and the laws that individuals set for themselves. *Manifest Activity* examines Reid's arguments for this view and the view's implications for the nature of character, motivation, and the special kind of causation involved in the production of human behaviour. Yaffe's assessment will greatly profit anyone working on current theories of action and free will, as well as historians of ideas.

It attracted over 180 submissions from leading scientists in academic and industrial research institutions and remains a major forum for the compound semiconductor research community since the first one held in 1966 at Edinburgh, UK, under the name of International Symposium on Gallium Arsenide and Related Compounds. These proceedings provide an international perspective on the latest research and an overview of recent important developments in III-V compounds, II-VI compounds, and IV-IV compounds. In total, 106 papers reported notable progress in the development of zinc oxide and spintronics. Steady advances

were seen in traditional topics such as III V based electronic and optoelectronic devices growth and processing and characterization Novel research trends were observed in quantum structures such as quantum wires and dots which are promising for future developments in nanotechnology As the primary forum for research into these materials and their device applications the book is an essential reference for researchers working on compound semiconductors in semiconductor physics device physics materials science chemistry and electronic and electrical engineering The Analytic Turn Michael Beaney,2010-12-22 This collection with contributions from leading philosophers places analytic philosophy in a broader context comparing it with the methodology of its most important rival tradition in twentieth century philosophy phenomenology whose development parallels the development of analytic philosophy in many ways The Analytic Turn will be of great interest to historians of philosophy generally analytic philosophers and phenomenologists *On Mr. Spencer's Unification of Knowledge* Malcolm Guthrie,1882 **Harper's Encyclopaedia of United States History from 458 A.D. to 1912** Benson John Lossing,1912 *Finding list, central library.
