for those who are firmly grounded in an understanding of architectural design and who have a clear vision of the potential use of ICT CAAD Futures 2005 called for innovative and original papers in the field of Computer Aided Architectural Design that present rigorous high quality research and development work Papers should point towards the future but be based on a thorough understanding of the past and present Computers in Building Godfried Augenbroe, Charles Eastman, 2012-12-06 Since the establishment of the CAAD Futures Foundation in 1985 CAAD experts from all over the world meet every two years to present and document the state of the art of research in Computer Aided Architectural Design Together the series provides a good record of the evolving state of research in this area over the last fourteen years The Proceedings this year is the eighth in the series The conference held at Georgia Institute of Technology in Atlanta Georgia includes twenty five papers presenting new and exciting results and capabilities in areas such as computer graphics building modeling digital sketching and drawing systems Web based collaboration and information exchange An overall reading shows that computers in architecture is still a young field with many exciting results emerging out of both greater understanding of the human processes and information processing needed to support design and also the continuously expanding capabilities of digital technology

Kalay, 2004 A comprehensive examination of computer aided architectural design and its potential effect on architectural design practice for practitioners educators students and researchers Computer aided design CAD technology has already changed the practice of architecture and it has the potential to change it even more radically With *Architecture's New Media* Yehuda Kalay offers a comprehensive exposition of the principles methods and practices that underlie architectural computing He discusses the aspects of information technology that are pertinent to architectural design analyzes the benefits and drawbacks of particular computational methods and looks at the potential of emerging computational techniques to affect the future of architectural design CAD technology introduced in the postwar era and adopted in everyday architectural practice beginning in the 1970s is now so indispensable that as William Mitchell observes in his foreword architectural practice without it is as unimaginable as writing without a word processor Yet Kalay argues it has had little qualitative effect This book provides a detailed introduction for practitioners educators students and researchers to aspects of CAD that go beyond the improvements in drafting modeling and rendering for which it is commonly used Computer aided architectural design CAAD is capable of modeling and manipulating objects not merely their graphical representations reasoning about and predicting performance of design solutions generating new design solutions through algorithmic and other methods managing vast amounts of information and taking advantage of opportunities offered by the Internet for collaboration across

time and space and for design of the virtual space of the Internet itself Architecture s New Media covers five main topics design methods and computer technology and the relationship between computers and design the principles of communication and representation generative design methods the advantages of computational methods for predicting and evaluating the performance of design solutions and current and future developments in technology including collaborative design intelligent design assistants construction automation and virtual design environments *Computer-aided Architectural Design* Great Britain.
