Digital filter design has become instrumental in many fields of electronics The objectives of this work is to study the benefit of using computer design tools to find equivalent digital filter realizations of analog filters An analog video bandpass filter for TV Intermediate Frequency signal extraction was selected as an example First we introduce the Finite Impulse Response Filter FIR and the Remez program that is used for optimal FIR filter design Other computer design tools such as ILS are used to design a number of existing bandpass filters Emphasis was placed on the used of zero one decomposition of filters to eliminate the number of multipliers and thus reduce hardware requirements **Computer-aided L-C Filter Design** David Moshe Breuer,1974

Algorithms for Computer Aided Design of Digital Filters Thomas H. Rich,1988 The algorithms necessary for the computer aided design of digital filters from lowpass prototypes has been developed and compared then implemented in a computer program to aid in the instruction of digital filter design The procedure for the design of lowpass highpass bandpass and bandstop digital filters from lowpass prototypes is well established and is based on transforming the prototype frequency response to meet desired characteristics This transformation can be accomplished in either the analog s domain or the digital z domain Therefore the two classical design techniques analog digital and digital digital design are based on doing the frequency response transformations in their respective analog or digital domains Since the theory for the standard filter types Butterworth Chebyshev and elliptic is developed in the analog or s domain the two methods for designing digital filters differ basically in the sequence of the design steps In the analog digital method the analog prototype is transformed and then digitized while in the digital digital method the analog prototype is digitized and then transformed Keywords Theses kr

Expressions for a generalized Modified Transitional Butterworth Chebyshev MTBC filter are derived The characteristics of this filter as applied to digital filter design are investigated It is shown that by adjusting location and order of the inserted zeros the cut off slope rate of the filter can be traded for maximum attenuation in the stop band The performance of this MTBC filter is compared to that of Butterworth

Chebyshev transitional Butterworth Chebyshev filters together with those suggested by other investigators It is shown that the stop band attenuation can be significantly increased without great sacrifice of cut off slope rate Step response of this MTBC filter is also obtained and compared with other filters Various tabulations as well as graphs of this filter are given for design purposes A computer program is developed for the design of this filter Author **CRC Handbook of Electrical Filters** John Taylor, Qiuting Huang, 2020-11-25 Interest in filter theory and design has been growing with the telecommunications industry since the late nineteenth century Now that telecommunications has become so critical to industry filter research has assumed even greater importance at companies and academic institutions around the world The CRC Handbook of Electrical Filters fills in the gaps for engineers and scientists who need a basic introduction to the subject Unlike the currently available textbooks which are filled with detailed highly technical analysis geared to the specialist this practical guide provides useful information for the non specialist about the various types of filters their design and applications The handbook covers approximation theory and methods and introduces CAD packages that perform approximation and synthesis for both analog and digital filters Also included are design methods for LCR active RC digital mechanical and switched capacitor SC filters A thorough survey of current design trends rounds out this complete assessment of a key field of study A Computer Aided Design of Digital Filters ,1977 Expressions for a generalized Modified Transitional Butterworth Chebyshev MTBC filter are derived The characteristics of this filter as applied to digital filter design are investigated It is shown that by adjusting location and order of the inserted zeros the cut off slope rate of the filter can be traded for maximum attenuation in the stop band The performance of this MTBC filter is compared to that of Butterworth Chebyshev transitional Butterworth Chebyshev filters together with those suggested by other investigators It is shown that the stop band attenuation can be significantly increased without great sacrifice of cut off slope rate Step response of this MTBC filter is also obtained and compared with other filters Various tabulations as well as graphs of this filter are given for design purposes A computer program is developed for the design of this filter Author **Computer-aided Design of State Space Digital Filter** Boi Nghia Tran, 1990 **Computer-aided Filter Design Manual** Sidney Gussow, 1969 Computer Aided Design of an Adaptive Digital Filter and Its Application to Signal Processing Ergun Erçelebi, 1999
