Diffusion In Materials:

Diffusion in Solids Helmut Mehrer, 2007-07-24 Diffusion is a vital topic in solid state physics and chemistry physical metallurgy and materials science Diffusion processes are ubiquitous in solids at elevated temperatures A thorough understanding of diffusion in materials is crucial for materials development and engineering This book first gives an account of the central aspects of diffusion in solids for which the necessary background is a course in solid state physics It then provides easy access to important information about diffusion in metals alloys semiconductors ion conducting materials glasses and nanomaterials Several diffusion controlled phenomena including ionic conduction grain boundary and dislocation pipe diffusion are considered as well Graduate students in solid state physics physical metallurgy materials science physical and inorganic chemistry or geophysics will benefit from this book as will physicists chemists metallurgists materials engineers in academic and industrial research laboratories

Diffusion in Materials A.L. Laskar, J.L. Bocquet, G. Brébec, C. Monty, 2012-12-06 This volume is the proceedings of the NATO Advanced Study Institute Diffusion in Materials held at Centre Paul Langevin Aussois during March 12 25 1989 There were 105 participants of whom 24 were lecturers and members of the international advisory committee In addition to the participants from NATO countries a small number of participants came from Australia Hungary Poland and Tunisia The principal aim of the organizing committee was to bring together scientists of wide interest and expertise in the field of diffusion and to familiarize the young workers in material science with the wide range of theoretical models and methods and of experimental techniques The Institute was concerned with the study of diffusion and related phenomena in solids which are at the cutting edge of novel technologies The discussion of basic theories of defects in solids and their transport with their applications in the understanding of diffusion processes in simple solids was followed by the wide range of current theoretical models and methods experimental techniques and their potential The lectures on the diffusion in specific materials included metals dilute and concentrated alloys simple and compound semiconductors stoichiometric and non stoichiometric oxides high T_c compounds carbides nitrides silicates conducting polymers and thin films ionic superionic amorphous and irradiated materials
