Handbook quickly became the definitive engineering reference. Although it remains a bestseller, the many advances realized in traditional engineering fields along with the emergence and rapid growth of fields such as biomedical engineering, computer engineering, and nanotechnology mean that the time has come to bring this standard setting reference up to date. New in the Second Edition: 19 completely new chapters addressing important topics in bioinstrumentation, control systems, nanotechnology, image and signal processing, electronics, environmental systems, structural systems. 131 chapters fully revised and updated. Expanded lists of engineering associations and societies. The Engineering Handbook, Second Edition, is designed to enlighten experts in areas outside their own specialties, to refresh the knowledge of mature practitioners, and to educate engineering novices. Whether you work in industry, government, or academia, this is simply the best, most useful engineering reference you can have in your personal office or institutional library.

Introduction to Advanced Food Process Engineering Jatindra Kumar Sahu, 2014-03-24. Food materials are processed prior to their consumption using different processing technologies that improve their shelf life and maintain their physicochemical, biological, and sensory qualities. Introduction to Advanced Food Process Engineering provides a general reference on various aspects of processing, packaging, storage, and quality control and assessment systems, describing the basic principles and major applications of emerging food processing technologies. The book is divided into three sections, systematically examining processes from different areas of food process engineering. Section I covers a wide range of advanced food processing technologies, including osmo-concentration of fruits and vegetables, membrane technology, nonthermal processing, emerging drying technologies, CA and MA storage of fruits and vegetables, nanotechnology in food processing, and computational fluid dynamics modeling in food processing. Section II describes food safety and various non-destructive quality assessment systems using machine vision systems, vibrational spectroscopy, biosensors, and chemosensors. Section III explores waste management by product utilization and energy conservation in the food processing industry. With an emphasis on novel food processes, each chapter contains case studies and examples to illustrate state-of-the-art applications of the technologies discussed.

Bravo, 1986. **Encyclopedia of Separation Technology** Douglas M. Ruthven, 1997-05-08. This two-volume, alphabetically organized encyclopedia is a compendium of the gases, liquids, and solids phase separation processes used industrially and in the laboratory. Based on the Kirk-Othmer Encyclopedia of Chemical Technology, the authoritative reviews written by experts in the field include both the technology and the underlying science of separations. Practical advice concerning choice of separation process is also given. Energy considerations and the role of economics in undertaking separations are discussed. Close to 60% of the material is reprinted; 30 percent is substantially revised or completely new.

Diffusion in Zeolites and Other Microporous Solids Jörg Kärger, Douglas M. Ruthven, 1992-05-07 Summarizes and reviews both the major experimental techniques and theories that have been developed and applied in the study of diffusion in microporous solids. Covers the most important works including those published in eastern bloc countries that have received limited coverage in the west available on the subject today. Provides a theoretical framework, experimental methods, and a comprehensive review of experimental data that illustrates the application of those methods. Additionally, it offers a summary of technological aspects of diffusion-limited processes. SI Units as well as Torr and the atmosphere as units of pressure are used throughout.
