Lifespan Development of Human Memory Peter Graf

(PhD.), Nobuo Ohta, 2002 An original approach to memory development that views memory as a continuous process of growth and loss over the human lifespan rather than as a series of separate periods Until recently the vast majority of memory research used only university students and other young adults as subjects Although such research successfully introduced new methodologies and theoretical concepts it created a bias in our understanding of the lifespan development of memory This book signals a departure from young adult centered research It views the lifespan development of memory as a continuous process of growth and loss where each phase of development raises unique questions favoring distinct research methods and theoretical approaches Drawing on a broad range of investigative strategies the book lays the foundation for a comprehensive understanding of the lifespan development of human memory Topics include the childhood and adulthood development of working memory episodic and autobiographical memory and prospective memory as well as the breakdown of memory functions in Alzheimer's disease Of particular interest is the rich diversity of approaches methods and theories The book takes an interdisciplinary perspective drawing on work from psychology psychiatry gerontology and biochemistry
